## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

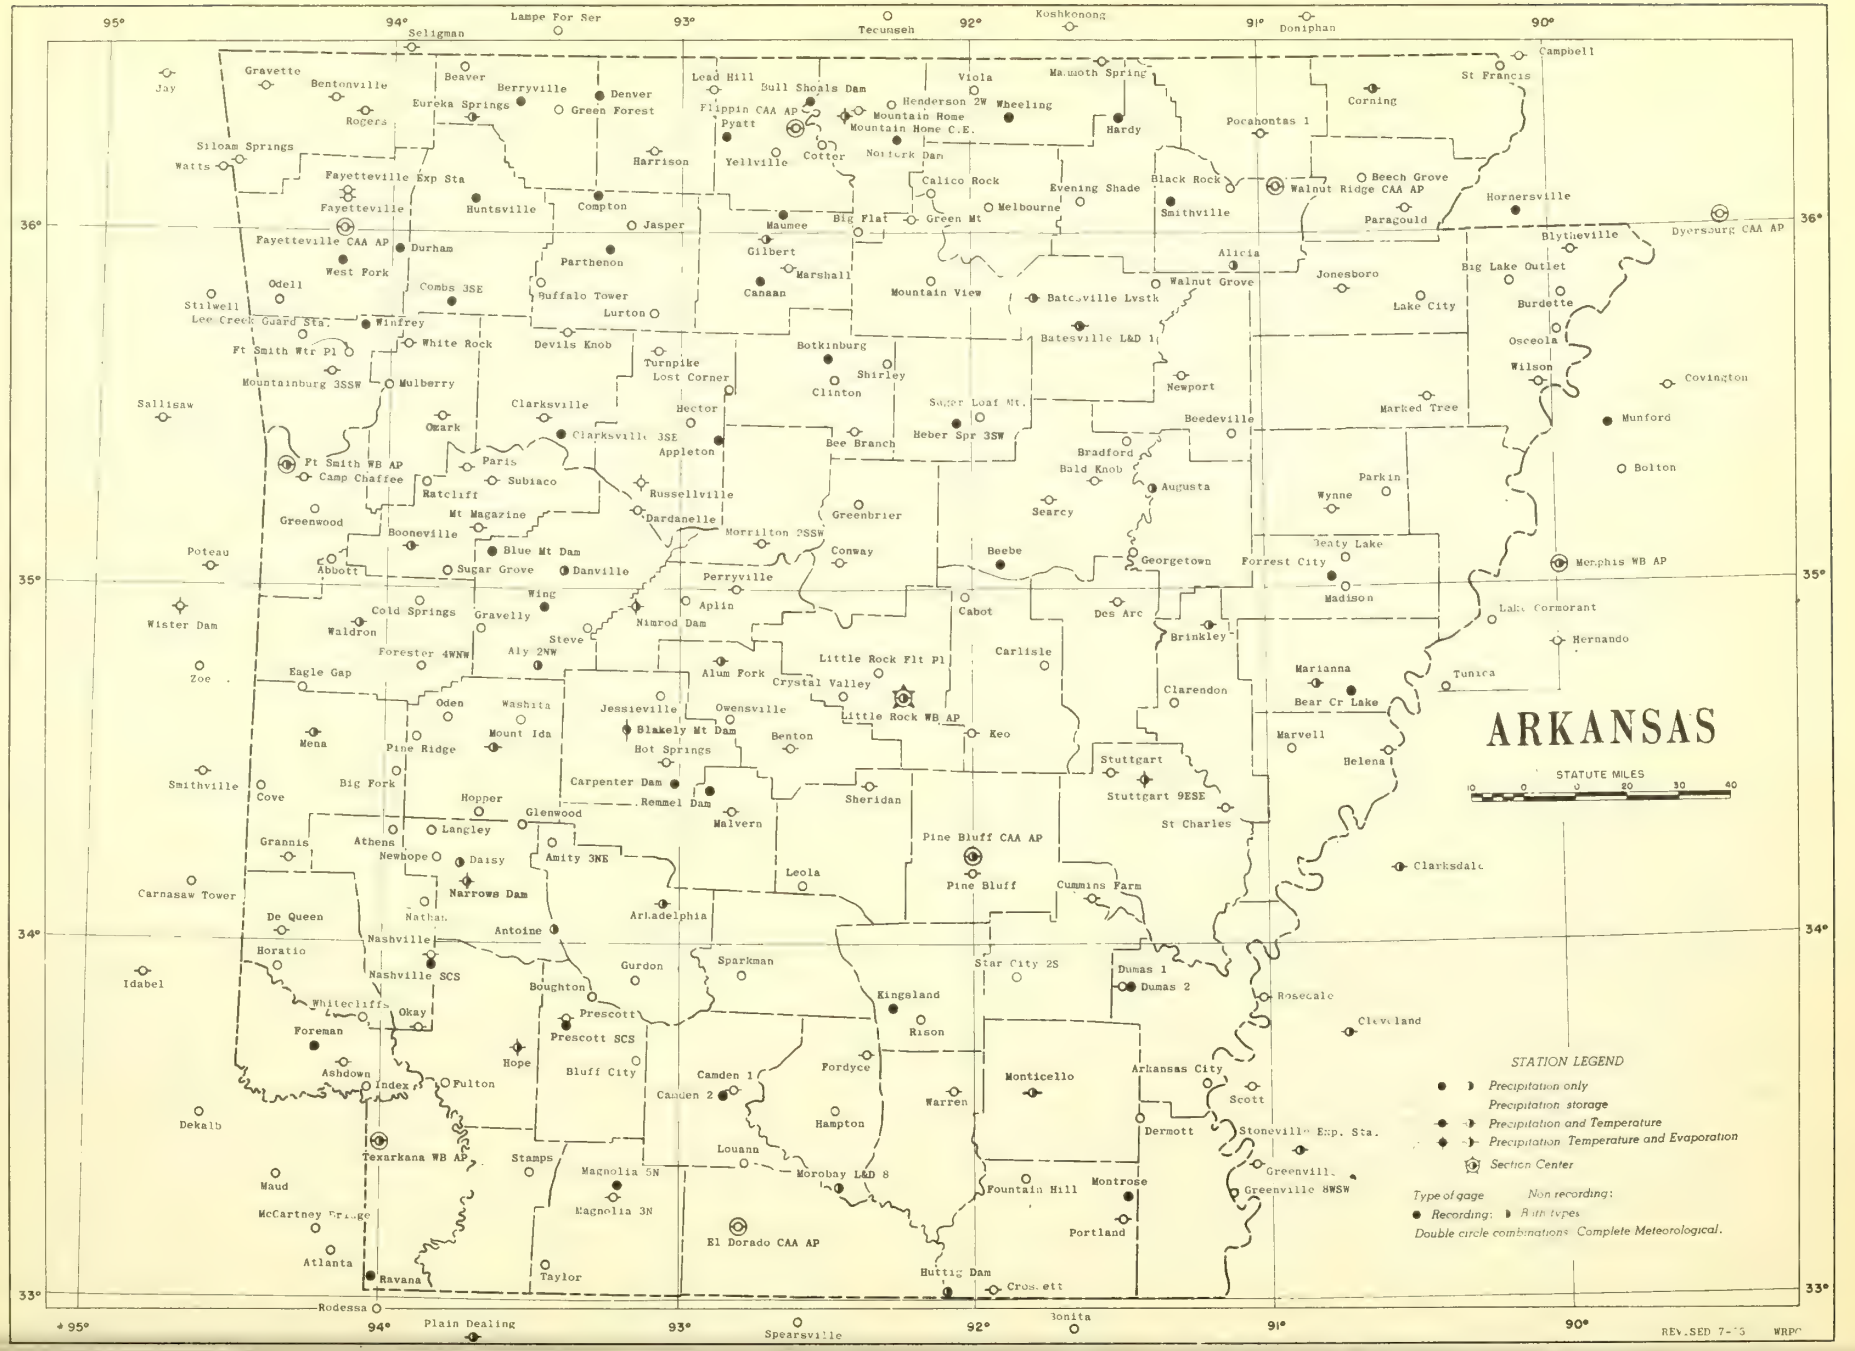
Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.



Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

WRPC, KANSAS CITY, MO., -- 12-9-53 -- 1025

## ARKANSAS

SEPTEMBER 1953
Volume LVIII No. 9

KANSAS CITY: 1953

## ARKANSAS - SEPTEMBER 1953

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

Drought conditions that had prevailed over Arkansas since the closing days of May continued throughout the month of September 1953.

The average monthly precipitation over the State was 0.99 inch, which is 2.33 inches below the normal. The greatest monthly total reported was 2.99 inches at Hopper. At the other extreme, Wilson and Sparkman had no rain during the month. The greatest daily amount reported was 2.70 inches at Langley on the 4th. There was an average of two days with 0.01 inch or more of precipitation during the month.

The monthly mean temperature for the State was 74.7° which is 0.6° above the normal, making this the warmest September over Arkansas since 1947, when the mean temperature was 76.0°. Mean temperatures at the various stations ranged from 70.4° at the Fayetteville C.A.A. Station to 78.5° at Hot Springs. The highest temperature recorded was 106° at Arkadelphia on the 28th and 29th, and the lowest 32° at Gilbert on the 23rd. Temperatures rose to 90° or higher on an average of 21 days during the month.

The picking of early cotton was getting well underway as the month opened, and was generally in full swing by mid-month. Bolls opened rapidly in most areas. Dry weather caused considerable cotton to cut out early and caused heavy shedding of small bolls. Fair to good yields were reported and the staple was of good quality. Drought conditions caused a deterioration of late cotton in all sections.

As the month opened a few fields of early rice had been combined, and the harvest was underway in most sections by the end of the second week. However, the harvest did not reach full swing in most areas until after the close of the month. Fair to good yields were generally reported. Late rice developed slowly. There was some apprehension of frost damage to late rice as the month closed.

Soybeans held up fairly well in the more favored areas, but it was too dry and hot for the plants to set pods in most sections. Prospects were fair on some bottom lands but irrigated fields promised a good yield. A considerable portion of the crop was cut for hay during the month.

The harvest of early corn for grain began near the first of the month, and continued through the close. Much of the crop was so badly damaged by drought that the yield of grain was materially reduced. A large acreage of early corn was cut for silage and some for fodder. In some instances fields were grazed. Late corn matured rapidly but only a very limited yield of grain was in prospect.

Sorghums burned in the drier areas but held up fairly well elsewhere. A considerable acreage was cut for silage during the month. Some late sorghums were so short that they were cut for hay.

The hay harvest was generally completed by the middle of the month, but farmers continued to make every effort to save anything possible that could be used for hay. Baling of the hay crop was nearing completion by the close of the month. An adequate supply of hay was saved in local areas in the southern part of the State but in general the hay crop was short.

Pastures continued to deteriorate during the month and generally furnished very little grazing. As a result, cattle required considerable heavy supplemental feeding. The stock water situation became critical in many areas during the latter half of the month. Marketing of cattle was heavy throughout the month despite unfavorable prices.

The month's weather was unfavorable for the seeding of winter grains. Many farmers dusted in winter wheat, oats, and other crops.

There were many reports of strawberry plants dying during the latter half of the month. As a result, prospects for next years crop appear unpromising.

### STORMS

The only destructive storm reported during the month of September 1953 was a wind storm that struck Arkansas County between 6:00 p.m. and 7:00 p.m. of the 18th causing widespread damage by blowing down heavy rice. No estimate of monetary loss is available and no other property damage was reported.

### FLOODS

There were no floods on the streams in Arkansas during the month of September 1953.--JFR

‡ DRAINAGE CODE: 1. Arkansas 2. Mississippi 3. Ouachita 4. Red 5. Saint Francis 6. Saline 7 White

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

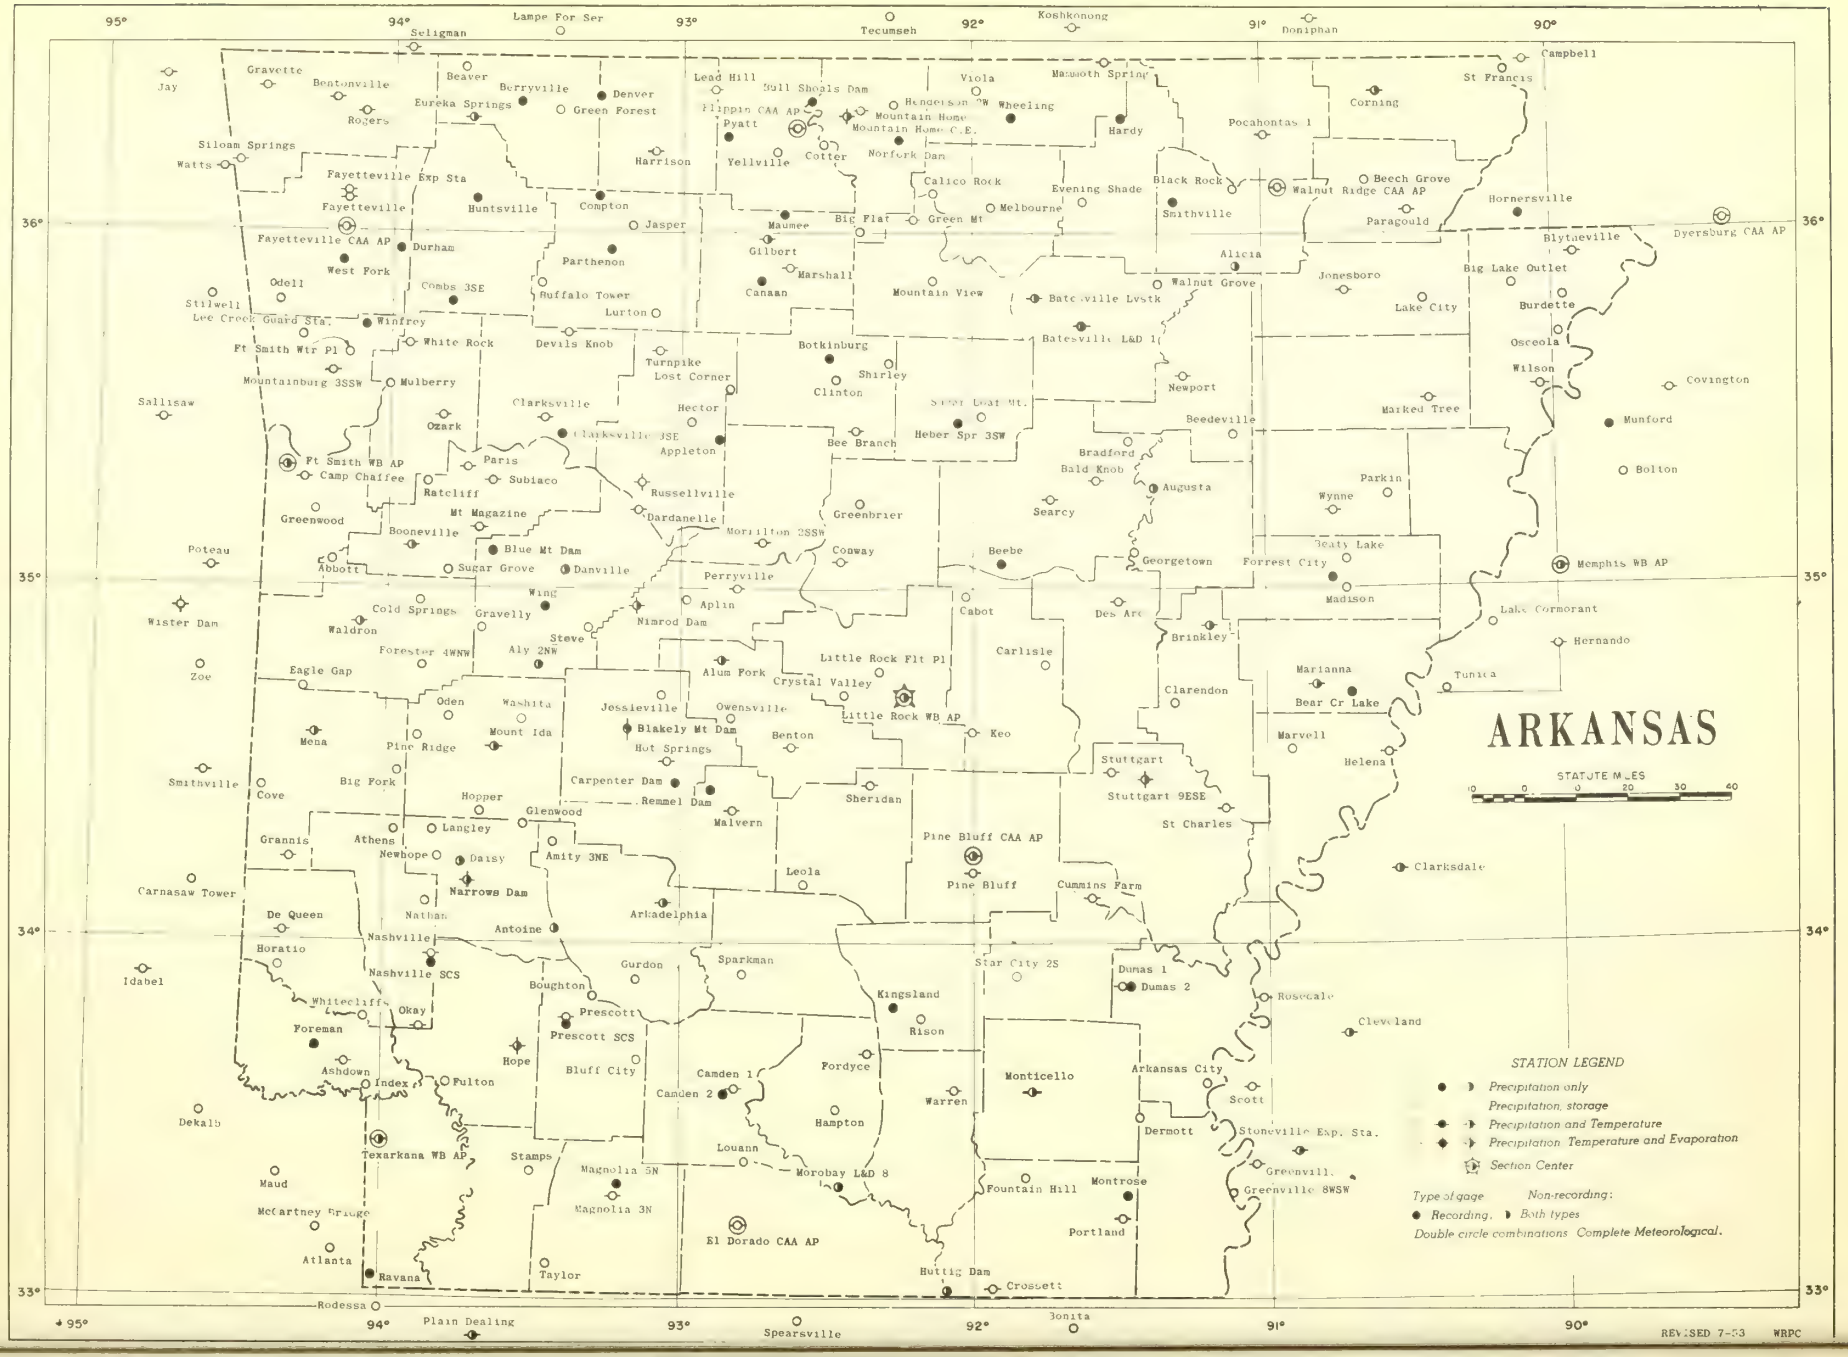
Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.



Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

- \- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
- \+ And also on a later date or dates.
- * Amount included in following measurement, time distribution unknown.
- // Gage is equipped with a windshield.
- B Adjusted to a full month.
- C Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data.
- E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
- M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
- R Daily values and monthly total from recording gage.
- T Trace, an amount too small to measure.
- V Includes total for previous month.
- SS This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

**Hourly precipitation data from recorder stations will be available in the publication "Hourly Precipitation Data".**

## ARKANSAS

OCTOBER 1953
Volume LVIII No. 10

KANSAS CITY: 1953

## ARKANSAS - OCTOBER 1953

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

Drought conditions that had persisted since the closing of May 1953 continued through October. The weather during the month, however, was ideal for the harvest of the State's crops.

The monthly average precipitation over the State was 1.48 inches, which is 1.75 inches below the normal, but nearly twice the 0.78 inch State average received during October, 1952. Monthly totals over the State ranged from 0.50 inch at Washita to 4.08 inches at Siloam Springs. The greatest daily precipitation recorded was 1.88 inches at Siloam Springs on the 4th. There was an average of 3 days with 0.01 inch or more during the month.

The monthly mean temperature, for the State was 64.8°, which is 1.9° above the normal. Monthly mean temperatures at the various stations ranged from 59.8° at the Fayetteville C.A.A. Station to 69.1° at Hot Springs. The highest temperature recorded was 104° at Ozark on the 1st and the lowest, 25° at Gilbert on the 30th. There was an average of 6 days during the month when temperatures rose to 90° or higher and one day on which temperatures fell to 32° or lower. There was scattered light frost over the northern half of the State on the mornings of the 8th, 25th, and 27th. There was scattered light to heavy frost on the mornings of the 28th and 29th, and heavy to locally killing frost on the morning of the 30th.

Dry, hot weather caused cotton to open rapidly. As a result, picking continued at a fast pace throughout the month. While the drought took a quite heavy toll of late cotton, yields of early varieties generally exceeded expectations. The gin turnout was generally good and the lint graded high.

The harvest of the rice crop progressed rapidly during the month and was about two-thirds complete by the close. Good yields were reported from most sections.

The soybean harvest continued throughout the month. Yields were generally below average. There were many reports of shattering. In many areas the beans were of inferior quality.

A considerable acreage of corn and sorghums was cut for silage. The harvest of early corn for grain was completed near mid-month in most areas. The harvest of late corn continued throughout the month. Yields were generally poor.

The hay harvest was generally completed during the first half of the month. Farmers, however, continued to save anything that would make hay.

The seeding of winter grains was at a standstill at the beginning of the month but made some progress after the showers on the 4th and 5th.

Pastures deteriorated steadily during the month. As a consequence, the condition of cattle worsened and became critical in many areas. Heavy supplemental feeding was necessary in most sections. The stock water situation was ciritical on many farms.

### FLOODS AND STORMS

There were no severe storms or floods during the month.--JFR

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

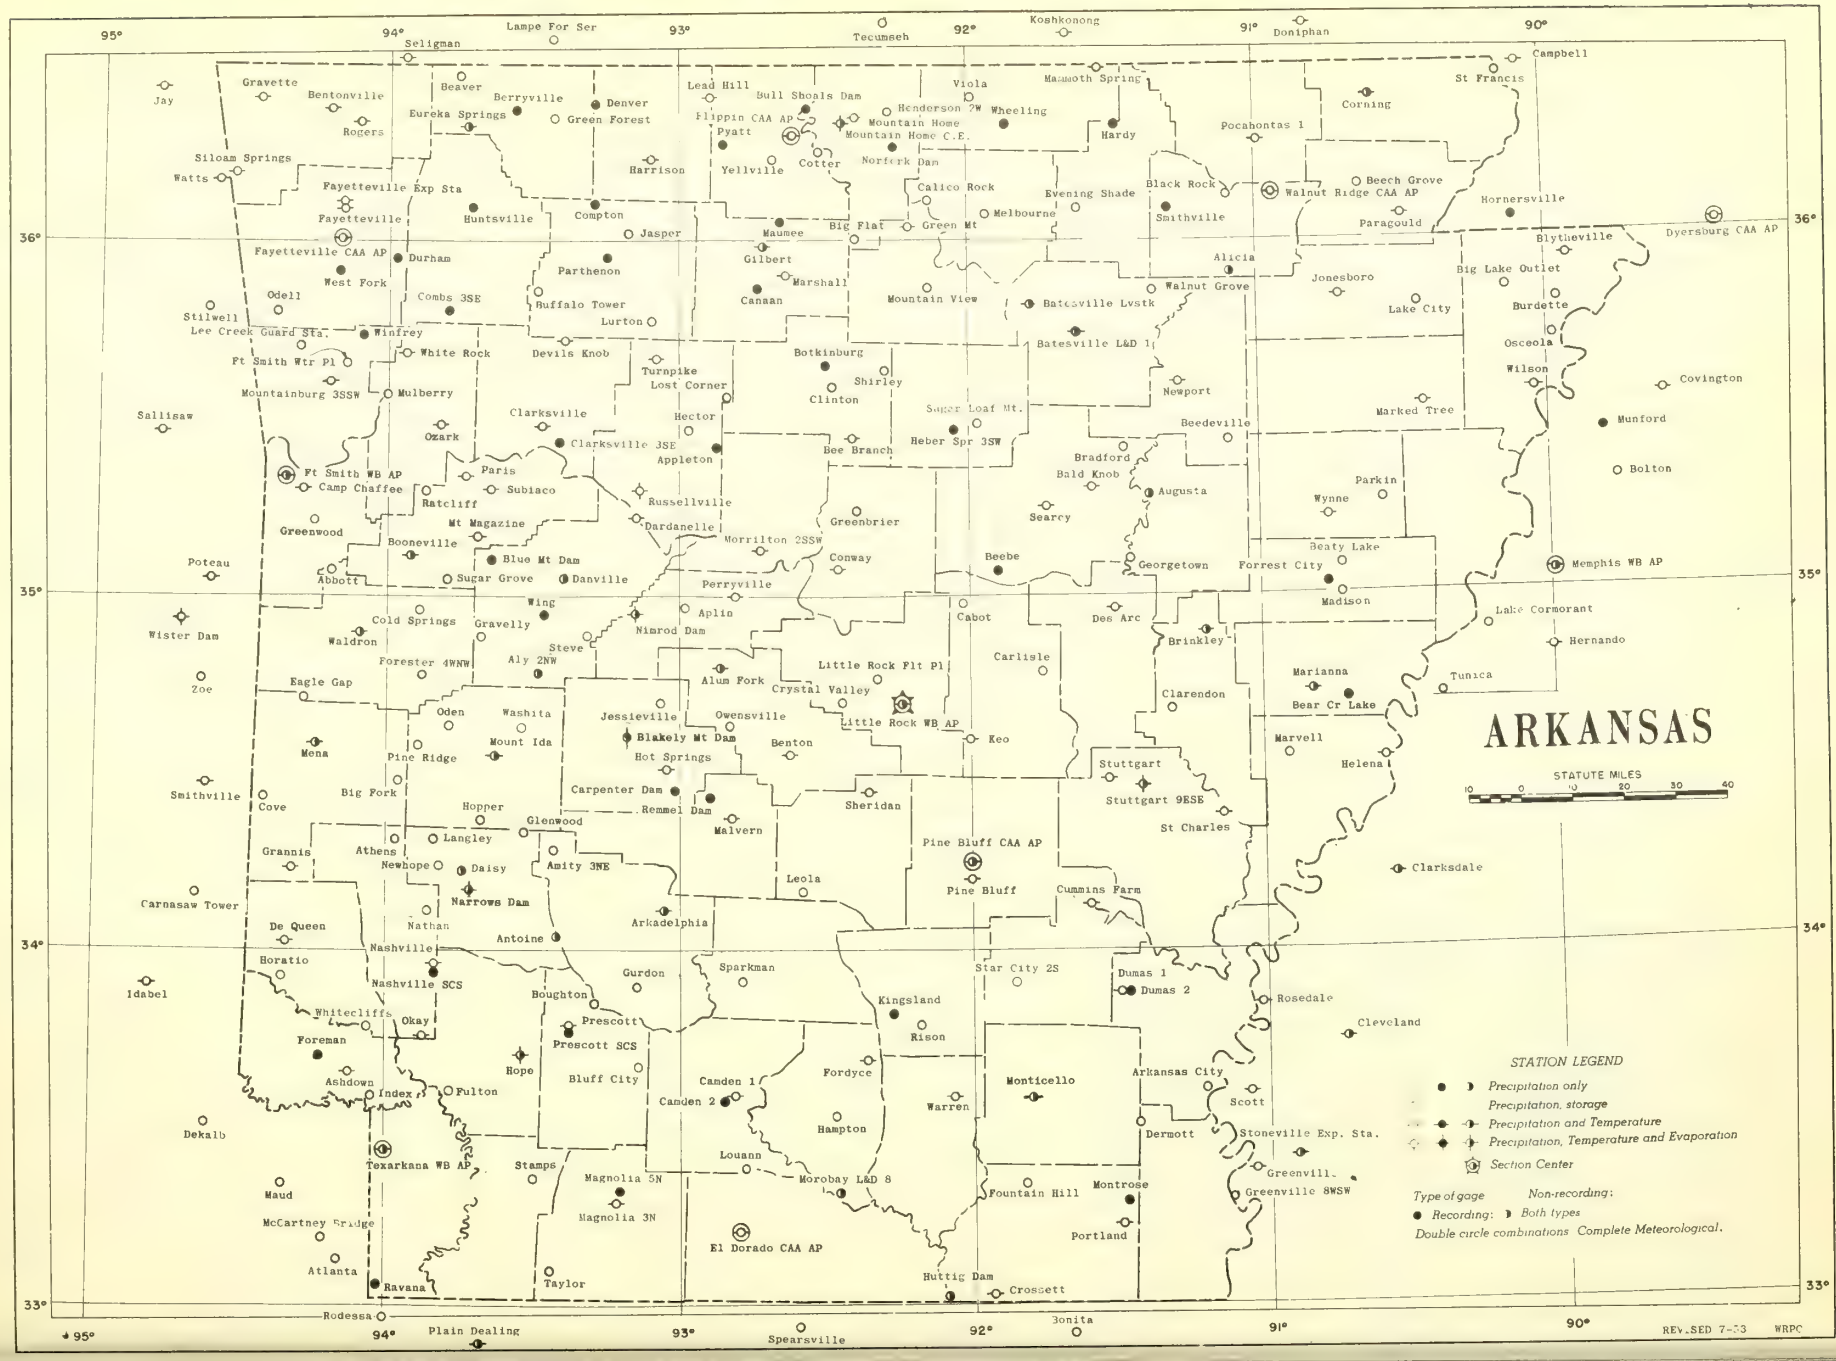
Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.



Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## ARKANSAS

NOVEMBER 1953
Volume LVIII No. 11

KANSAS CITY: 1954

## ARKANSAS - NOVEMBER 1953

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

The month of November 1953 over Arkansas brought a continuation of the drought conditions that had persisted since the closing days of May.

The average monthly precipitation over the State was 2.16 inches, which is 1.64 inches below the normal. Monthly totals at the various stations over the State ranged from 0.82 inch at Siloam Springs to 4.56 inches at Dermott. The greatest daily amount recorded was 2.90 inches at Helena on the 22nd. The only measurable snow reported was 1.5 inches at Mammoth Spring and 0.5 inch at Pocahontas on the 7th. Several stations reported snow flurries, too light to measure. Measurable precipitation occurred on an average of five days during the month.

The monthly mean temperature for the State was 49.5° which is 1.7° below the normal. Monthly mean temperatures at individual stations ranged from 44.7° at Mount Magazine to 53.7° at Fordyce. The highest temperature reported was 85° at Fordyce on the 19th and the lowest 15° at Mammoth Spring on the 28th. Temperatures fell to 32° or lower on an average of 13 days during the month. Heavy to killing frosts were general over the State on the morning of the 9th.

Considerable cotton remained to be picked as the month opened but due to favorable conditions during most of the month picking was generally near completion by by the close.

There were some reports of damage to rice due to frosts and freezing weather during the closing days of October and during the first two weeks of November. The damage was mainly to grade rather than to quantity of yield. The rice harvest was slowed near the middle of the month by lack of sufficient storage facilities.

Good progress was made in gathering corn and combining soybeans. Late harvest of these crops continued through the close of the month.

The planting of winter grains continued throughout the month. In most sections the ground was too dry for proper germination of the seeds until after the general rains at the beginning of the third week. Cover crops generally showed improvement after these rains.

Pastures continued poor in most sections. As a result cattle required heavy supplemental feeding.

The duck hunting season got off to a poor start due to lack of water over the eastern portion of the State. Many reservoirs, ponds, and streams in the area were dry.

The forest fire situation continued extremely critical during the first half of the month but was generally alleviated by the rains during the latter half.

The only destructive storm reported during the month was a wind and hail storm that caused an estimated $35,000 damage to barns and sheds in the south suburbs of Little Rock during the early evening of the 19th. No crop damage resulted.

The streams in the State continued at low stages throughout the month.--J.F.R.

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

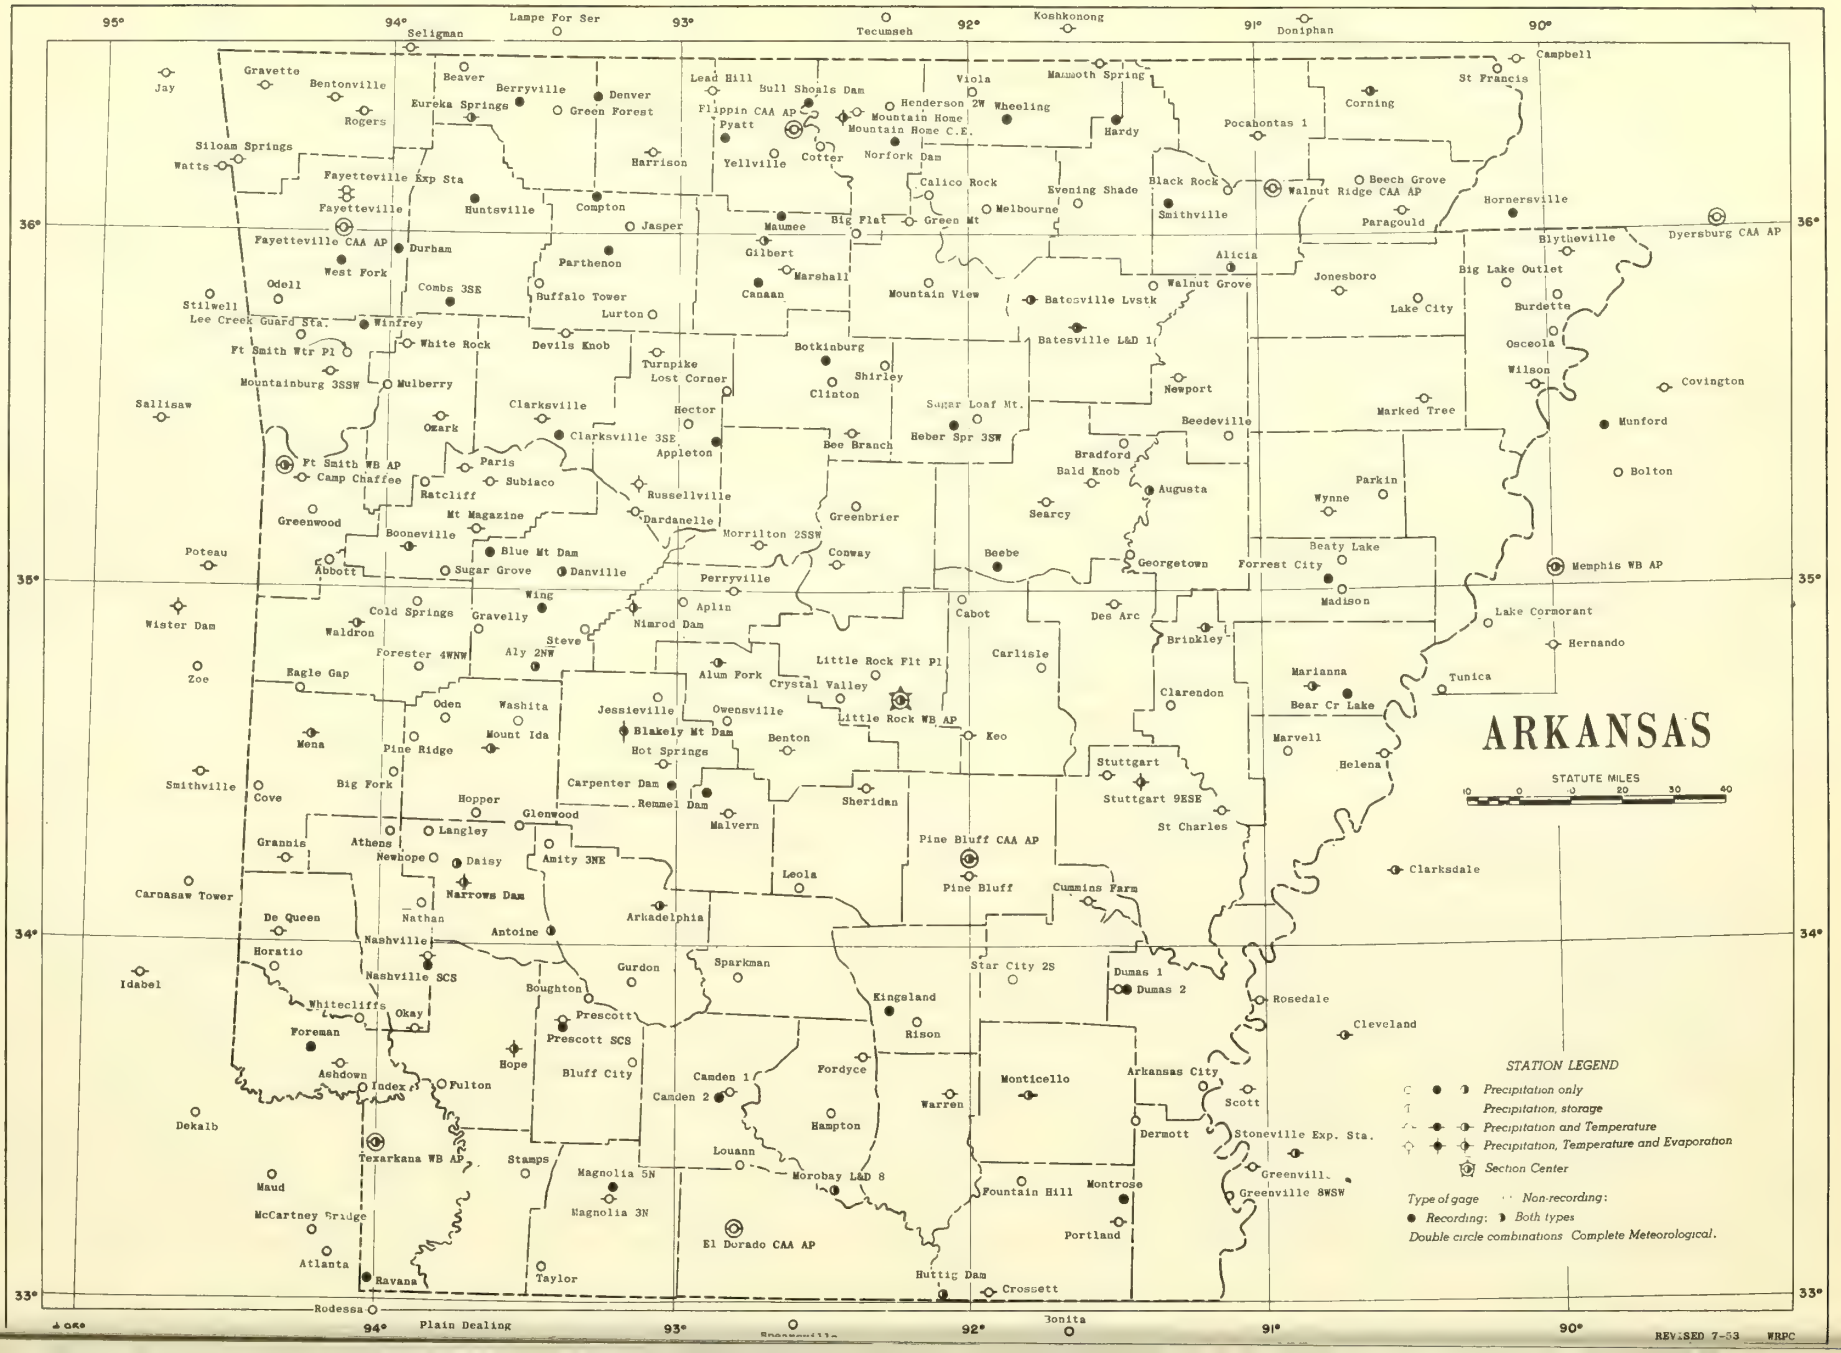
Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.



Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

W.R.P.C., Kansas City, Mo. -- 1-19-54 -- 1025

**Hourly precipitation data from recorder stations will be available in the publication "Hourly Precipitation Data".**

# CLIMATOLOGICAL DATA

## ARKANSAS

DECEMBER 1953
Volume LVIII No. 12

KANSAS CITY: 1954

## ARKANSAS - DECEMBER 1953

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

General rains early in the month of December 1953 brought welcome relief from the drought conditions that had persisted over the State since the closing days of the preceding May.

The monthly average precipitation for the State was 3.15 inches--which is 1.04 inches below the normal. Monthly totals at individual stations ranged from 0.82 inch at Calico Rock to 7.15 inches at Crossett. The greatest daily amount reported was 2.86 inches at Fountain Hill on the 3rd. The greatest monthly snowfall was 1.0 inch at Eureka Springs, Devils Knob had 0.5 inch, and Gravette 0.4 inch. These were the only measurable amounts of snow reported. Several stations had flurries too light to measure. There was an average of eight days with 0.01 inch or more of precipitation during the month.

The monthly mean temperature for the State was 41.1°, which is 1.7° below the normal. Monthly mean temperatures ranged from 34.8° at Mt. Magazine to 44.6° at Crossett. The highest temperature recorded was 72° at Crossett on the 6th and the lowest 0° at Mt. Magazine on the 23rd. Temperatures fell to freezing or lower on an average of 18 days during the month.

Farm activity during the month was limited to picking remnant cotton, gathering pecans, building fences, clearing, butchering, and other usual late fall and early winter chores. The picking of remnant cotton was delayed by wet fields in many sections and some remained to be picked at the close of the month.

Pastures showed a steady improvement during the month. Winter crops, such as late planted rye, vetch, and other grasses had advanced enough to furnish considerable pasturage during the latter half of the month. As a result, cattle improved, and were generally in fair condition by the close of the month.

Rains during the month replenished the surface soil moisture in nearly all sections. The streams of the State, however, continued at low stages. Many pin oak flats in the eastern half of the state either remained dry or had water only in low places. Many reservoirs and rice fields in the area were dry throughout the month. These conditions resulted in an extremely poor season in the major duck-hunting areas of the State. Many duck did not make their usual stop in the State but continued their southward migration in search of adequate water.

### STORMS

At 9:00 a.m. on the morning of the 5th, a hail storm in the vicinity of Portland in Ashley County caused an estimated $3,000 damage to remnant cotton.

A tornado was first reported near Spencer, Louisiana, at 6:00 p.m. of the 5th. It moved in a northeasterly direction, lifting to the northeast of the town. It again touched ground six miles south of the Arkansas-Louisiana line, just north of the town of Beekman, Louisiana. The storm remained on the ground across Ashley County, Arkansas to a point five miles northeast of Montrose, Arkansas, where it apparently dissipated. The path averaged 500 yards in width and covered a total distance of about 55 miles. The storm caused extensive damage to timber for lumber and pulp wood in the heavily forested area in its path. The tops of many large trees were broken off, making salvage operations extremely difficult. A total of four houses were destroyed and six damaged in Ashley County. The total damage to property, other than crops, was estimated at $164,500. Crop damage, mostly to remnant cotton, was estimated at $2,500. There were no deaths or injuries.

At 6:00 p.m. of the 5th a wind storm struck the southeastern portion of Union County. A total of eleven houses were damaged and three out-buildings were destroyed. Property damage was estimated at $11,000.

At 7:00 p.m. of the 5th a wind storm struck the southeastern portion of Drew County. A total of seven houses were destroyed and four damaged. The storm also destroyed seven out-buildings and damaged four. Property damage was estimated as $25,000. There were no deaths or injuries. --J.F.R.

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

| | |
|---|---|
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

WRPC, KANSAS CITY, MO., -- 2-15-54 -- 1025

## CORRECTIONS

**July 1953:** Saint Francis, Table 3, amount on 20th should be 0.49 and on 21st 0.00.

**August 1953:** Gravette, Table 2, temperature departure should be -0.7.

ANNUAL SUMMARY 1953

Volume LVIII No. 13

KANSAS CITY: 1954

# ARKANSAS - 1953

Walter C. Hickmon, Section Director - Little Rock

## WEATHER SUMMARY

The year 1953 brought drought conditions to Arkansas that persisted from the closing days of May until early December. A severe shortage of water was felt in all sections during the late summer and fall months. fter the high water of the late spring, the streams of the State fell to low stages which continued throughout the year. By late summer there were many reports of wells, stock ponds, and reservoirs going dry.

The average annual precipitation for the State was 43.45 inches, which is 5.37 inches below or 89% of the normal. The station having the greatest annual total was Athens with 58.67 inches. The station having the least annual precipitation was Henderson 2 W with 22.26 inches. The wettest month was May with a State average of 7.59 inches, and the driest June with a State average of 0.63 inch. The greatest 24-hour precipitation amount reported was 5.73 inches at Mena on July 21st. The heaviest snowfall was in January when the State average was 0.3 inch.

The annual mean temperature was 62.4°, which is 1.0° above the normal. The warmest month was June with a mean temperature of 83.4° and the coolest was December with a mean temperature of 41.1°. The highest temperature recorded during the year was 109° at the Batesville Livestock Experiment Station on July 7th and the lowest 0° at Mount Magazine on December 23rd.

## SYNOPSIS BY MONTHS

JANUARY: Warm dry weather during the month was favorable for all outdoor activities. As a result, good progress was made with the preparation of seed beds and winter chores. The mean temperature for the State was 45.2°, which is 4.0° above the normal. The State's monthly average precipitation was 0.78 inch below normal--making this the driest January since 1948.

A small tornado struck the Macedonia area of Lee Township in Cleveland County damaging several houses and destroying two barns and several out-buildings.

The only flood on the streams of the State during the month was on the Ouachita where the river reached a stage of 17.5 feet at Arkadelphia on the 24th, and 26.0 feet at Camden on the 26th. No damage resulted.

FEBRUARY: Dry and relatively warm weather prevailed over Arkansas during the month of February. The average monthly precipitation for the State was 3.08 inches, which is 0.51 inch below the normal--making it the driest February since 1947. The monthly mean temperature for the State was 45.8°, which is 2.1° above the normal. The most important farm activity during the month was plowing and the preparation of seed beds for spring planting. Except for brief intervals the month's weather was nearly ideal for such work. Spring gardening began in the southeast portion during the opening week and was in full swing over the entire State by the close of the month. Fruit buds began to swell early in the month but there was sufficient cool weather to hold bud development in check.

On the 11th during a severe electrical storm, lightning ignited three oil storage tanks near El Dorado. On the 20th another oil storage tank near El Dorado was struck by lightning, and a definite funnel-shaped cloud dipped to the ground briefly in the southeastern part of the town of Hazen. Damage was slight. There was no flooding on the streams in Arkansas during the month.

MARCH: This was the wettest March in Arkansas since 1945, and the sixth wettest on record since statewide records were begun in 1891. The monthly average precipitation for the State was 7.37 inches, which is 2.61 inches above the normal. The monthly mean temperature for the State was 56.2°, which is 3.8° above normal. Wet ground from frequent rains seriously hampered the preparation of fields for the planting of spring crops. Warm moist weather was favorable for the growth of all forms of vegetation. Winter grains and cover crops grew nicely and pastures improved. By the close of the month fall oats were beginning to head. Fruit bud development was arrested by low nighttime temperatures during the first half of the month but peach and plum trees were blooming by mid-March.

On the 3rd a hailstorm with stones reaching 3/4 inch in diameter struck Melbourne. No damage resulted. A hailstorm struck Little Rock on the 12th, damaging airplanes at the Municipal Airport, and damaging a commercial greenhouse. During the early morning of the 14th, two tornadoes struck in West-Central Arkansas. One skipped over a path from Chismville in Logan County to a point 5 miles northeast of the Clarksville Airport. The other moved over a path from Newnata in Stone County to Myron in Izard County. Damage from both storms was estimated at $98,500. On the same morning another tornado moved from Delaware in Yell County through the Bunker Hill and Mill Creek Communities to Dover in Pope County. The Bunker Hill-Mill Creek area was the hardest hit. Seven persons were injured, two of them seriously. On the same morning a hailstorm occurred in Van Buren County. During the afternoon of the 14th a hailstorm struck Harrisburg causing extensive damage to roofs and neon signs, and a hail and wind storm struck to the south of Wynne damaging automobiles and the screen of a drive-in theater. Another wind and hail storm on the same afternoon struck the Lepanto-Rivervale area of Poinsett County damaging a tenant house. During the evening of the 17th a windstorm damaged power lines at DeWitt and another struck the Noble Lake area of Jefferson County, injuring one person and damaging four houses. During the evening of the 21st a very light hailstorm occurred at Little Rock. During the early afternoon of the 22nd widespread wind, hail, and electrical storms buffeted eastern Arkansas, causing considerable property damage but only one injury. During the late morning and early afternoon of the 31st a windstorm demolished a school building and injured five persons in the Cherry Hill community of Perry County and a wind and hail storm struck Pulaski and Lonoke Counties with principal damage in the vicinity of the town of Lonoke.

Heavy rains on the 13th and 14th and again on the 17th and 18th caused sharp rises on all streams in the State with minor flooding on the White River at Augusta and below, the Ouachita, Saline, Petit Jean, Little Red, and Lower Black Rivers. No flood damage resulted.

APRIL: Rainy and relatively cool weather prevailed during the month. The average monthly precipitation for the State was 7.10 inches, which is 2.16 inches above normal --making this the wettest April since 1945. The monthly mean temperature for the State was 57.7°, which is 3.9° below normal. Wet fields seriously delayed the preparation of seed beds and the planting of spring crops. A small amount of cotton had been planted by the end of the first week but by mid-month only from 10% to 25% of cotton land was ready for planting. Some corn had been planted as the month opened and some fields were up by the close of the month, but in many localities germination and growth had been checked by cold, wet weather. The preparation of fields and the seeding of rice were delayed by wet ground. The month's weather was favorable for the growth of small grains, hay, and pastures.

Lightning during a severe electrical storm at Fort Smith on the 5th set fires which destroyed a church and a commercial building. During the evening of the 9th a hailstorm struck Piggott. Stones ranged from the size of marbles to an inch in diameter and covered the ground to a depth of one inch with some drifts to three feet reported. During the afternoon of the 11th a hailstorm in Bradley County caused extensive damage to crops--principally in the Grand Ridge, Prospect, and Blue Springs areas. Late in the evening of the 14th a hailstorm caused considerable damage to gardens, flowers, and shrubs at Mena. During the early morning of the 15th lightning set fires that destroyed two houses in El Dorado. Small hail accompanied this storm. Early in the morning of the 18th a severe wind and hail storm struck Sebastian County causing extensive damage over a path extending from Fort Smith to Lavaca. The ball park at Fort Smith was destroyed. In addition there was damage to roofs, windows, automobiles, crops, and fruit trees. Stones as large as golf balls, with some the size of baseballs, were reported. A series of severe wind and hail storms during the early morning of the 18th caused widespread damage to property and crops, and caused two deaths and forty-one injuries in Crittenden Cross, Independence, Jackson, Poinsett, and White Counties. Principal damage was due to wind but heavy hail occurred in several localities. The two fatalities were in Poinsett County. During the evening of the 23rd a tornado

destroyed one building and damaged several others at Alma in Crawford County. During the early morning of the 24th a tornado struck the College Hill section of Texarkana damaging houses, automobiles, and trees. On the same morning a wind and hail storm, with stones ranging from 1/2" to 1-1/2" in diameter, struck a small area including the Hope Experiment Station of the University of Arkansas.

Three periods of heavy rains over the Ouachita watershed on the 5th and 6th, the 23rd and 24th, and again on the 29th, caused sharp rises on the stream at Arkadelphia and a slower rise and continued high water at Camden. The White River was above flood stage the opening days of the month due to high water from the previous month. No damage resulted from these floods.

MAY: Below-normal temperatures and frequent general rains prevailed over the State until the 19th, giving way to bright sunshine and above-normal temperatures after that date. The average monthly precipitation for the State was 7.59 inches, which is 2.48 inches above normal. The State's monthly mean temperature was 70.1°, which is 1.0° above the normal. Rains interfered with the preparation of seed beds and the planting of crops until the last ten days of the month. By the close of the month cotton planting was twenty days behind schedule. Much of the crop that was planted came up in uneven stands. By the 19th only from 10-15% of the State's rice acreage had been planted but by the close of the month 80% of the crop was seeded. Very few soybeans had been planted until late in the month. In contrast small grains made good progress and during the last two weeks ripened rapidly.

A fire set by lightning at Earle on the 3rd destroyed a house and furnishings. Several storms occurred on the 10th. Shortly after noon several persons watched two small tornado funnels merge into one southwest of Russellville, where several buildings were damaged and one destroyed. At about the same time a windstorm damaged a house and unroofed several buildings at Vilonia. During the mid-afternoon a wind and hail storm injured five persons and damaged a house at Weiner in Poinsett County. Lightning destroyed one house and damaged another at Carlisle. A windstorm destroyed a barn and a truck at Rector. Later in the afternoon a hail and wind storm destroyed a barn, damaged several buildings, and damaged timber in Izard County. Stones averaging 1/2" in diameter, with some as large as 1", covered 35% of the ground. Fires set by lightning destroyed too farm houses near Dumas. A drive-in theater screen was destroyed during a wind and hail storm at Newport but no hail damage was reported. The storms continued into the 11th. During the early morning, lightning destroyed a house near Foreman and damaged an apartment house in North Little Rock. Also, during the early morning wind damaged a school building at Siloam Springs. Late in the afternoon lightning destroyed a house at Slaty Crossing in Yell County. During the evening a windstorm damaged a house at Monticello. The 12th was also stormy. Lightning damaged a house in the West Fork community of Washington County and another at Mulberry. During the afternoon windstorms damaged one house and a barn in the Shiloh Community of Grant County, a half block area in Rison, and destroyed a garage at Macedonia. During the late afternoon a hail and wind storm struck the Blue Springs, Hopewell, and Centerpoint Communities in northwestern Bradley County where hailstones averaging 1 1/2 inches in diameter covered the ground to a depth of 2 inches. During the morning of the 16th, lightning severely damaged a business building in Little Rock.

General moderate to heavy rains, beginning on the 10th and continuing through the 18th, caused sharp rises on the Ouachita River at Arkadelphia and Camden. The White River was above flood stage at Clarendon for the entire month, at St. Charles from the 5th through the 31st and was above flood stage at Georgetown and Des Arc from the 15th to the 25th. The Little Red River at Judsonia showed a sharp rise on the 14th. Total flood damage was estimated at $59,000, with the greatest damage along the Ouachita below Remmel Dam.

JUNE: This was the hottest and second driest June in Arkansas since statewide records were begun in 1891. Most crops suffered considerable drought damage. The mean monthly temperature for the State was 83.4°, which is 6.3° above normal. The average monthly precipitation for the State was 0.63 inch, which is 3.48 inches below normal. Seven stations reported no rain during the month. There was heavy seeding of cotton during the first two weeks and by mid-month most of the crop had been planted. By the end of the third week most early cotton was in bloom. Early corn made good to excellent progress during the first half of the month but was seriously in need of rain by the latter half. The seeding of rice was completed early in the month. During the last half of the month heavy watering was necessary. Soybeans generally made good progress but stands were poor in late planted fields. The harvest of small grains was completed and some very good yields were obtained. The first half of the month was ideal for putting up hay. Pastures generally suffered from the drought after a brief period of rapid growth early in the month.

During the afternoon of the 7th a hailstorm, with stones ranging up to the size of baseballs, struck the Huffman area of Mississippi County. No damage resulted. During the late afternoon and early evening of the 11th a series of severe wind and thunderstorms progressed southwestward from Piggott in extreme northeastern Arkansas along an irregular path to Hot Springs in Garland County and Malvern in Hot Springs County. The duration of the storm at points along its path was approximately one-half hour. Damage was mostly to roofs, windows, signs, and shade trees and was greatest in the vicinity of Piggott. Hail occurred in Eastern Clay County where it caused considerable crop damage. Four persons were injured. During the late afternoon of the 11th, winds accompanying a local thunderstorm destroyed a hangar at the Ozark Municipal Airport but planes stored in the hangar were not damaged. During the same afternoon some very small hail fell at Dyess in Mississippi County but no damage resulted. During the late afternoon of the 23rd, hailstones ranging up to one inch in diameter fell during a thunderstorm at McDougal in Clay County. Very little damage resulted. The only flooding during the month was on the Lower White River, where Clarendon was above flood stage from the beginning of the month until the 5th and at St. Charles until the 6th. This flooding was due to continued high water from the preceding month. Damage was negligible.

JULY: Favorable growing weather prevailed during the month with adequate precipitaiion in most sections. Monthly precipitation averaged 4.65 inches over the State, which is 0.91 inch above normal. The monthly mean temperature for the State was 80.2° which is 0.3° below normal. Cotton generally made good progress, except that the prospects for some late cotton were not promising. Early rice fared very well. Much early corn was Beyond recovering as the month opened, but late corn responded to the rains. Soybeans made good progress. Hay crops and pastures generally showed improvement.

Shortly after noon of the 3rd a fire set by lightning destroyed the Drew Theater in Monticello. During the afternoon of the 6th a windstorm destroyed one house and damaged several houses and other buildings in the McGinty Community of Faulkner County. Lightning during severe electrical storms on the same afternoon set fires that destroyed houses and other buildings at Cash, Mount Ida, and Paragould. Some hail accompanied the thunderstorm at Cash, damaging cotton, rice, and soybeans. During the evening of the 6th a wind, rain, and electrical storm caused considerable damage in the business district of Russellville. During the morning of the 8th a fire set by lightning destroyed a farm house seven miles south of Lonoke. During the evening of the 8th a windstorm damaged buildings at Hector. During the afternoon of the 20th several persons watched a tornado demolish an old log barn in the Jefferson Community of Desha County. No other damage was reported. A windstorm damaged a house and barn in the Saint Paul Community of Howard County during the afternoon of the 21st. On the 25th a man was killed by lightning in a field near Nettleton.

AUGUST: The month saw a return of drought conditions to the State. The average monthly precipitation for the State was 1.59 inches, which is 2.00 inches below normal. The monthly mean temperature for the State was 79.6°, which is 0.4° below normal. Cotton generally fared well except for some daytime wilting and shedding of bolls in the northeast and east-central portions of the State. Some cotton opened and limited picking began during the third week. Late and intermediate corn made good progress during the first two weeks and much of the

crop was made before the close of the month. Rice made good progress and a few fields were combined during the closing week. Soybeans made fair to good progress but were badly in need of water by the closing week. Pastures were generally in good condition at the beginning of the month, but deteriorated rapidly.

A windstorm struck Jonesboro and Bono during the early afternoon of the 4th, causing $38,000 damage. During the same afternoon, lightning killed 7 head of milk goats at the Compton Community of Newton County and set a fire that destroyed a barn and stored hay in Izard County, 12 miles south of Melbourne. During the evening of the 5th a windstorm destroyed two small planes and damaged a third at the Russellville Airport. Five cows were killed by lightning nine miles south of Hope during the afternoon of the 6th. During the afternoon of the 12th a wind and hail storm struck Clarksville, causing considerable damage. During the early morning of the 15th lightning killed 7 head of cattle and set a fire which damaged a house at Mammoth Spring. On the 16th lightning set a fire which destroyed a barn and hay at Eureka Springs. At noon of the 16th a wind and hail storm struck Fayetteville damaging several houses and barns. Hailstones averaging 1/2 inch in diameter damaged some corn. A short time later, a wind and hail storm struck Ozark. Stones ranged from 1/4 to 1/2 inch. Damage was slight. One person was injured by lightning at Texarkana during the afternoon of the 18th.

SEPTEMBER: Drought conditions persisted during the month. The average monthly precipitation for the State was 0.99 inch, which is 2.33 inches below normal. The monthly mean temperature was 74.7°, which is 0.6° above normal. Cotton bolls opened rapidly and picking made good progress. Fair to good yields of good quality staple were reported. Fair to good progress was made with the rice harvest but it did not get into full swing until after the close of the month. Soybeans held up fairly well in the favored areas but it was too hot and dry for the plants to set pods in most sections. The harvest of early corn began early in the month and continued through the close. Pastures continued to deteriorate. Farmers made every effort to save anything that could be used for hay but even so, a short hay crop was in prospect.

The only destructive storm during the month was a windstorm that struck Arkansas County during the evening of the 18th causing widespread damage by blowing down heavy rice.

OCTOBER: Drought conditions that had persisted since the closing days of May continued through October. The monthly average precipitation was 1.48 inches, which is 1.75 inches below normal. The State's monthly mean temperature was 64.8°, which is 1.9° above the normal. Hot, dry weather caused cotton to open rapidly. As a result, picking continued at a fast pace. The gin turnout was generally good and the lint graded high. The harvest of the rice crop progressed rapidly and was about two-thirds complete by the close of the month. Yields were generally good. The soybean harvest continued throughout the month. Yields were generally below average and in many areas the beans were of inferior quality. The harvest of corn continued through the month. The hay harvest was generally completed near the middle of the month but farmers continued to save anything that would make hay. Dry ground seriously hampered the seeding of winter grains. Pastures deteriorated rapidly and the condition of cattle worsened during the month. There were no severe storms during the month.

NOVEMBER: Drought conditions continued throughout the month. The average monthly precipitation for the State was 2.16 inches, which is 1.64 inches below normal. The State's monthly mean temperature was 49.5°, which is 1.7° below normal. The picking of cotton was generally near completion by the close of the month. There were some reports of frost damage to rice but the damage was mainly to grade, rather than to yield. Good progress was made in gathering corn and combining soybeans. In most areas the ground remained too dry for planting winter grains or for the proper germination of the seeds until after the rains of the third week. Pastures continued poor and cattle required heavy supplemental feeding. The forest fire situation was critical during the first half of the month but improved during the latter half.

The only destructive storm during the month was a wind and hail storm that caused considerable damage to barns and sheds in the south suburbs of Little Rock during the early evening of the 19th.

DECEMBER: General rains early in the month brought welcome relief from the drought conditions that had persisted over the State from the closing days of the preceding May. The average monthly precipitation for the State was 3.15 inches, which is 1.04 inches below normal. The monthly mean temperature for the State was 41.1°, which is 1.7° below normal. Farm activity during the month was limited to picking remnant cotton, gathering pecans, and the usual late fall and early winter chores. Pastures showed a steady improvement and winter crops had generally advanced sufficiently to furnish considerable pasture. As a result, cattle showed a steady improvement and were generally in fair condition by the close of the month.

During the morning of the 5th a hailstorm in the vicinity of Portland in Ashley County caused considerable damage to remnant cotton. During the early evening of the 5th a tornado that originated near Spencer, Louisiana, crossed the Arkansas-Louisiana line just north of the town of Beekman, Louisiana, and crossed Ashley County, Arkansas, to a point 5 miles northeast of Montrose. The average width of the path was 500 yards and the total length about 55 miles. The storm caused extensive damage to timber for lumber and pulp wood. A total of 4 houses were destroyed and 6 damaged. There were no deaths or injuries. At about the same time, a windstorm struck the southeastern portion of Union County, damaging 11 houses and destroying 3 outbuildings. Later in the same evening a windstorm struck the southeastern portion of Drew County, destroying 7 houses and damaging 4. The storm also destroyed 7 outbuildings and damaged 4.--JFR

REFERENCE NOTES

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F; precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 4.

The four digit identification numbers in the Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried in the June and December issues of Climatological Data.

Data for recorder stations denoted by "C" are processed for special purposes and published in "Hourly Precipitation Data". Length of record for recorder-only stations may be found in the annual issue of "Hourly Precipitation Data".

- \- No record.
- \+ Also later date (dates) or months.
- * Amount included in following measurement.
- // Gage is equipped with a windshield.
- B Adjusted to full month.
- E Amount is wholly or partially estimated.
- M Less than a complete month of record available; if average value is entered, less than 10 days of record are missing; see monthly Climatological Data for detailed daily record.
- R Data from recording gage.
- T Trace, an amount too small to measure.
- V Includes total for previous month.

Subscription Price: 15 cents per copy; monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

JANUARY 1954
Volume LIX No. 1

KANSAS CITY: 1954

## ARKANSAS - JANUARY 1954

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

The month of January 1954 brought frequent rains and near normal temperatures to Arkansas.

The average monthly precipitation for the State was 6.08 inches--making this the wettest month over Arkansas since May of 1953, when the State average was 7.59 inches. The precipitation averaged 1.64 inches above the normal. Monthly totals at individual stations ranged from 1.47 inches at Gravette to 10.05 inches at Marianna. The greatest daily precipitation recorded was 3.33 inches at Fordyce on the 15th. The average monthly snowfall was 3.3 inches. The greatest monthly snowfall recorded was 11.0 inches at Aplin. Precipitation of 0.10 inch or more occurred on an average of eight days during the month.

The monthly mean temperature for the State was 41.5°, which is 0.3° above the normal. Monthly mean temperatures at the reporting stations ranged from 34.8° at Mt. Magazine to 49.0° at Magnolia 3 N. The highest temperature during the month was 81° on the 20tn at Camden 1, and the lowest -5° at the Fayetteville Airport. Temperatures fell to 32° or lower on an average of 20 days during the month.

Farm activity during the month was generally limited to the usual winter chores. For the most part, fields were too wet for plowing. There was, however, some preparation of seed beds during the latter half of the month, and a little orchard work was accomplished during the last two weeks.

There was still some remnant cotton in the fields as the month opened. Picking was generally completed by the close of the first week.

Surface soil moisture was adequate in most sections at the beginning of the month and frequent rains during the month improved the situation. Subsoil moisture, however, continued inadequate, especially in the northwestern quarter of the State. At the beginning of the month, streams were low, many wells were dry, and the stock water situation was critical in some areas. While this condition was alleviated by the January rains, most areas--and especially the northwestern section--were in need of more moisture as the month closed.

The rains were favorable for the growth of winter grains, but the crops were in need of warm weather by the close of the month. Pastures showed improvement during the month and furnished some grazing in most sections. Cattle continued in fair condition but some supplemental feeding was necessary in most areas.

### STORMS

There were no severe storms or floods during the month.--JFR

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Ⓓ Data in the column formerly headed "No. of Days .01 or more" have been changed to "No. of Days .10 or more" effective January 1, 1954.
- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+ And also on a later date or dates.
* Amount included in following measurement, time distribution unknown.
// Gage is equipped with a windshield.
B Adjusted to a full month.
C Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data.
E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R Daily values and monthly total from recording gage.
T Trace, an amount too small to measure.
V Includes total for previous month.
SS This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## ARKANSAS

FEBRUARY 1954
Volume LIX No. 2

KANSAS CITY: 1954

## ARKANSAS - FEBRUARY 1954

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

This was the warmest February in Arkansas since 1938, and the fourth warmest since state-wide records were begun in 1891. The monthly mean temperature for the State was 50.7°, which is 7.0° above normal. Monthly mean temperatures at individual stations ranged from 43.3° at Mount Magazine to 55.3° at Crossett. The highest temperature reported was 86° at Camden on the 10th and the lowest 12° at Gilbert on the 8th. There was an average of 10 days during the month on which temperatures fell to freezing or lower.

In addition to being unseasonably warm, this was the driest February over Arkansas since 1947. The average monthly precipitation was 2.24 inches which is 1.35 inches below the normal. Monthly totals at the reporting stations ranged from 0.55 inch at the Fort Smith Airport to 5.20 inches at Des Arc. The only measurable snowfall reported during the month was 0.4 inch at Fayetteville on the 27th. Several stations reported flurries too light to measure. There was an average of 2 days during the month with 0.10 inch or more of precipitation.

The principal agricultural activity during the month was plowing and the preparation of seed beds. This work progressed rapidly in all sections under almost ideal weather conditions. Early gardens were planted in most sections and there was considerable planting of truck crops.

The month's weather was favorable for the growth of small grains and cover crops. Grasses greened. Pastures showed a steady improvement and were furnishing some grazing. As a result, livestock showed an improvement during the latter half of the month.

The unseasonably warm weather of the month resulted in the rapid growth of vegetation. By the close, plums were in bloom and there were some reports of peaches blooming in the southern portion.

Considerable progress was made in hauling fertilizer, top dressing small grains with nitrogen, and applying dormant sprays to fruit trees. The weather was also favorable for all late winter and early spring chores.

The streams in Arkansas continued at low stages during the month.

### STORMS

During the evening of the 15th tornadoes occurred at Clarksville and in the Kellum Community of Sevier County, and a windstorm occurred in Southwestern Conway County. Damage was extensive in Clarksville where the gymnasium of the College of the Ozarks was destroyed, 8 houses were destroyed, and 160 damaged, 60 other buildings destroyed and 172 damaged. Wind caused considerable damage to houses, barns, and outbuildings over a wide area in Southwestern Conway County. A house and a barn were destroyed in Kellum Community.

Early in the morning of the 16th a tornado caused extensive damage in the vicinity of Chelford in Mississippi County and one person was severely burned by lightning in Little Rock.

During the afternoon of the 19th tornadoes caused considerable damage at the Sulphur Springs Community in Jefferson County and a lesser amount at Greenwood in Sebastian County. Both funnel shaped clouds were observed by several persons. On the same afternoon, a windstorm damaged a house and destroyed a tool shed 5 miles south of Berryville in Carroll County.

During the late afternoon of the 27th a tornado and hail storm caused considerable damage in Phillips County to the southwest of West Helena. Hail stones ranging form 1/2" to 1-1/2" in diameter were reported.--JFR

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

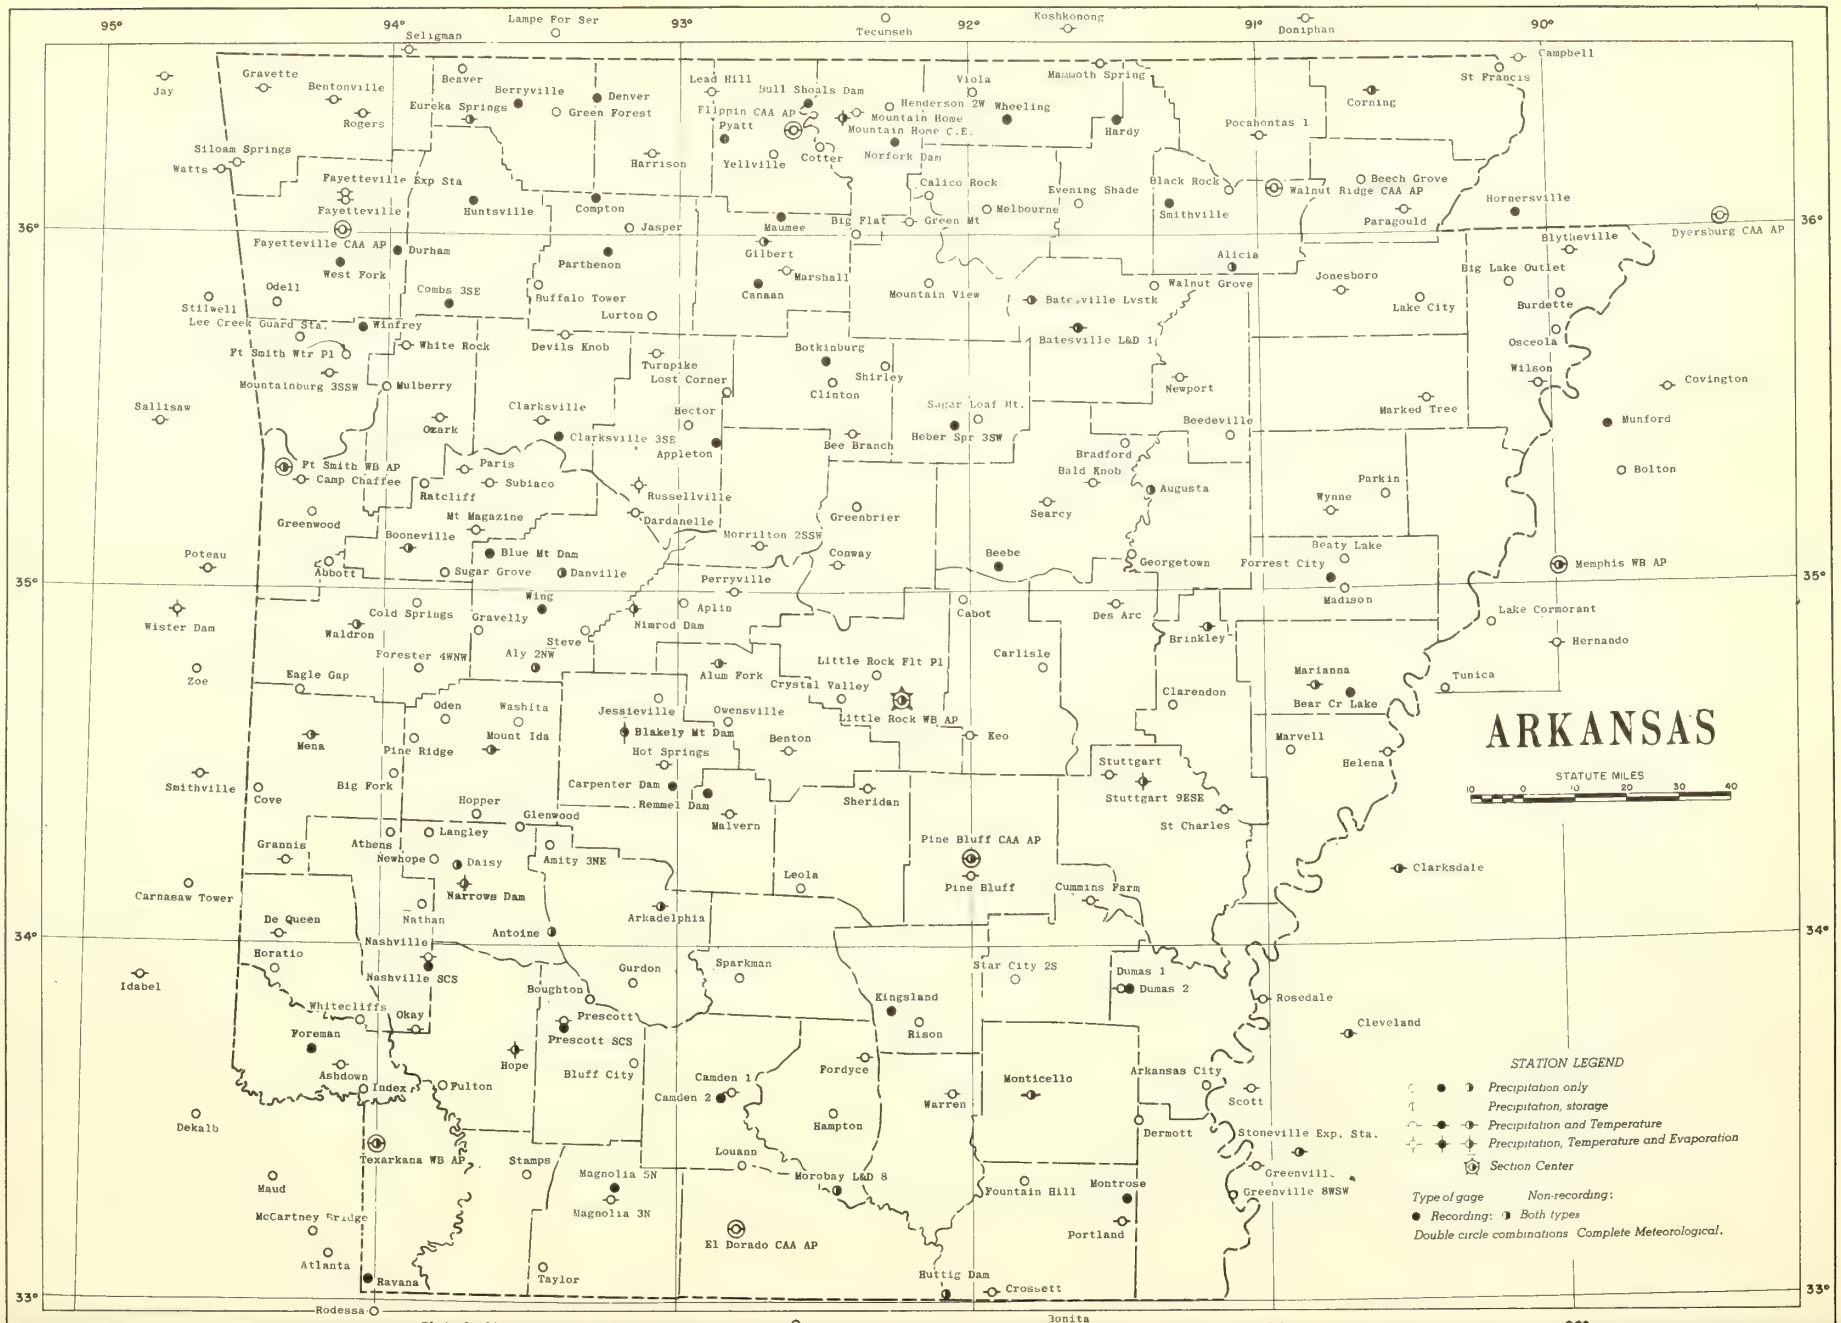
Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.



Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

| | |
|---|---|
| Φ | Data in the column formerly headed "No. of Days .01 or more" have been changed to "No. of Days .10 or more" effective January 1, 1954. |
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Daily values and monthly total from recording gage. |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## ARKANSAS

MARCH 1954
Volume LIX No. 3

KANSAS CITY: 1954

## ARKANSAS - MARCH 1954

Walter C. Hickmon, Section Director - Little Rock, Arkansas

### WEATHER SUMMARY

The weather over Arkansas continued dry through March as precipitation averaged 2.06 inches, which is 43% of the normal. It was the fifth driest March of record, and the driest since 1925. All stations except Cotter reported below normal precipitation. Total amounts for the month ranged from 3.93 inches at Fulton to 0.44 inch at Waldron. Streams continued at extremely low levels.

Temperature readings fluctuated greatly during the month, and ranged from a high of 90° at Camden 1 and De Queen 2 NE on the 11th, to a low of 10° at Bentonville and Gravette on the 4th. The average temperature for the month, 50.8°, was 1.6° below normal.

The first few days of the month were cold with light rains and snows. Temperatures averaged about 8° below normal, and practically all stations reported their lowest readings for the month on the 3rd and 4th with minimum temperatures ranging from 10° to 25°. The freeze damaged the peach crop. The rain and snow during this period was light, with amounts generally less than 0.50 inch. Measurable snowfall was confined to the northwestern corner of the State, where amounts ranged up to 2.5 inches at Eureka Springs and 3.0 inches at Beaver. Farming operations, which were advanced beyond the average for the season because of the warm and dry weather in February, were slowed by the cold weather.

After the 5th temperatures warmed rapidly, and by the 11th near record high temperatures were registered in many areas. Following a cold front which moved across the State on the 12th, temperatures dropped sharply to near record lows. The cold air moved in with high winds and dust storms. Humidities were low. Top soils dried rapidly and rain was needed throughout the State. There were extensive forest fires.

On the 18th and 19th, rains occurred over most of the State. While amounts were light in northern sections, some moderate to heavy amounts were received in southern and central areas. The greatest daily amount reported anywhere in the State during the month was 3.25 inches on the 19th at Fulton.

Showers and thunderstorms again occurred on the 23-25th as a squall line moved across the State. Several local storms were reported in a number of areas. The rains complemented those of the previous week in that southern sections received light amounts while northern sections received the moderate to heavy rainfall.

Following the rains of the 18-19th and 23-25th, small grains, pastures, winter crops, and gardens made good growth, although by the close of the month additional rains were still needed. A few stations received good rains on the 31st; and some light hail, with no damage, was reported in the Arkadelphia, Pine Bluff, and Walnut Ridge areas.

### SEVERE STORM DATA

A squall line moving across the State on the nights of the 24-25th was accompanied by two tornadoes and damaging winds in a number of areas. One tornado occurred in Benton County with $10,000 damage in a 20-mile long path from Centerton at 10:40 p.m. to the Bentonville area at 11:15 a.m., and thence northeastward to the Twelve Corners Community in the northeastern corner of the county. There were no fatalities but four people were injured. Another tornado occurred at 2:15 a.m. in about the same area between Centerton and Hiwasse, causing an estimated $5,000 property damage. Damaging winds were reported in the Texarkana area as well as in Boone County.--MOA

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

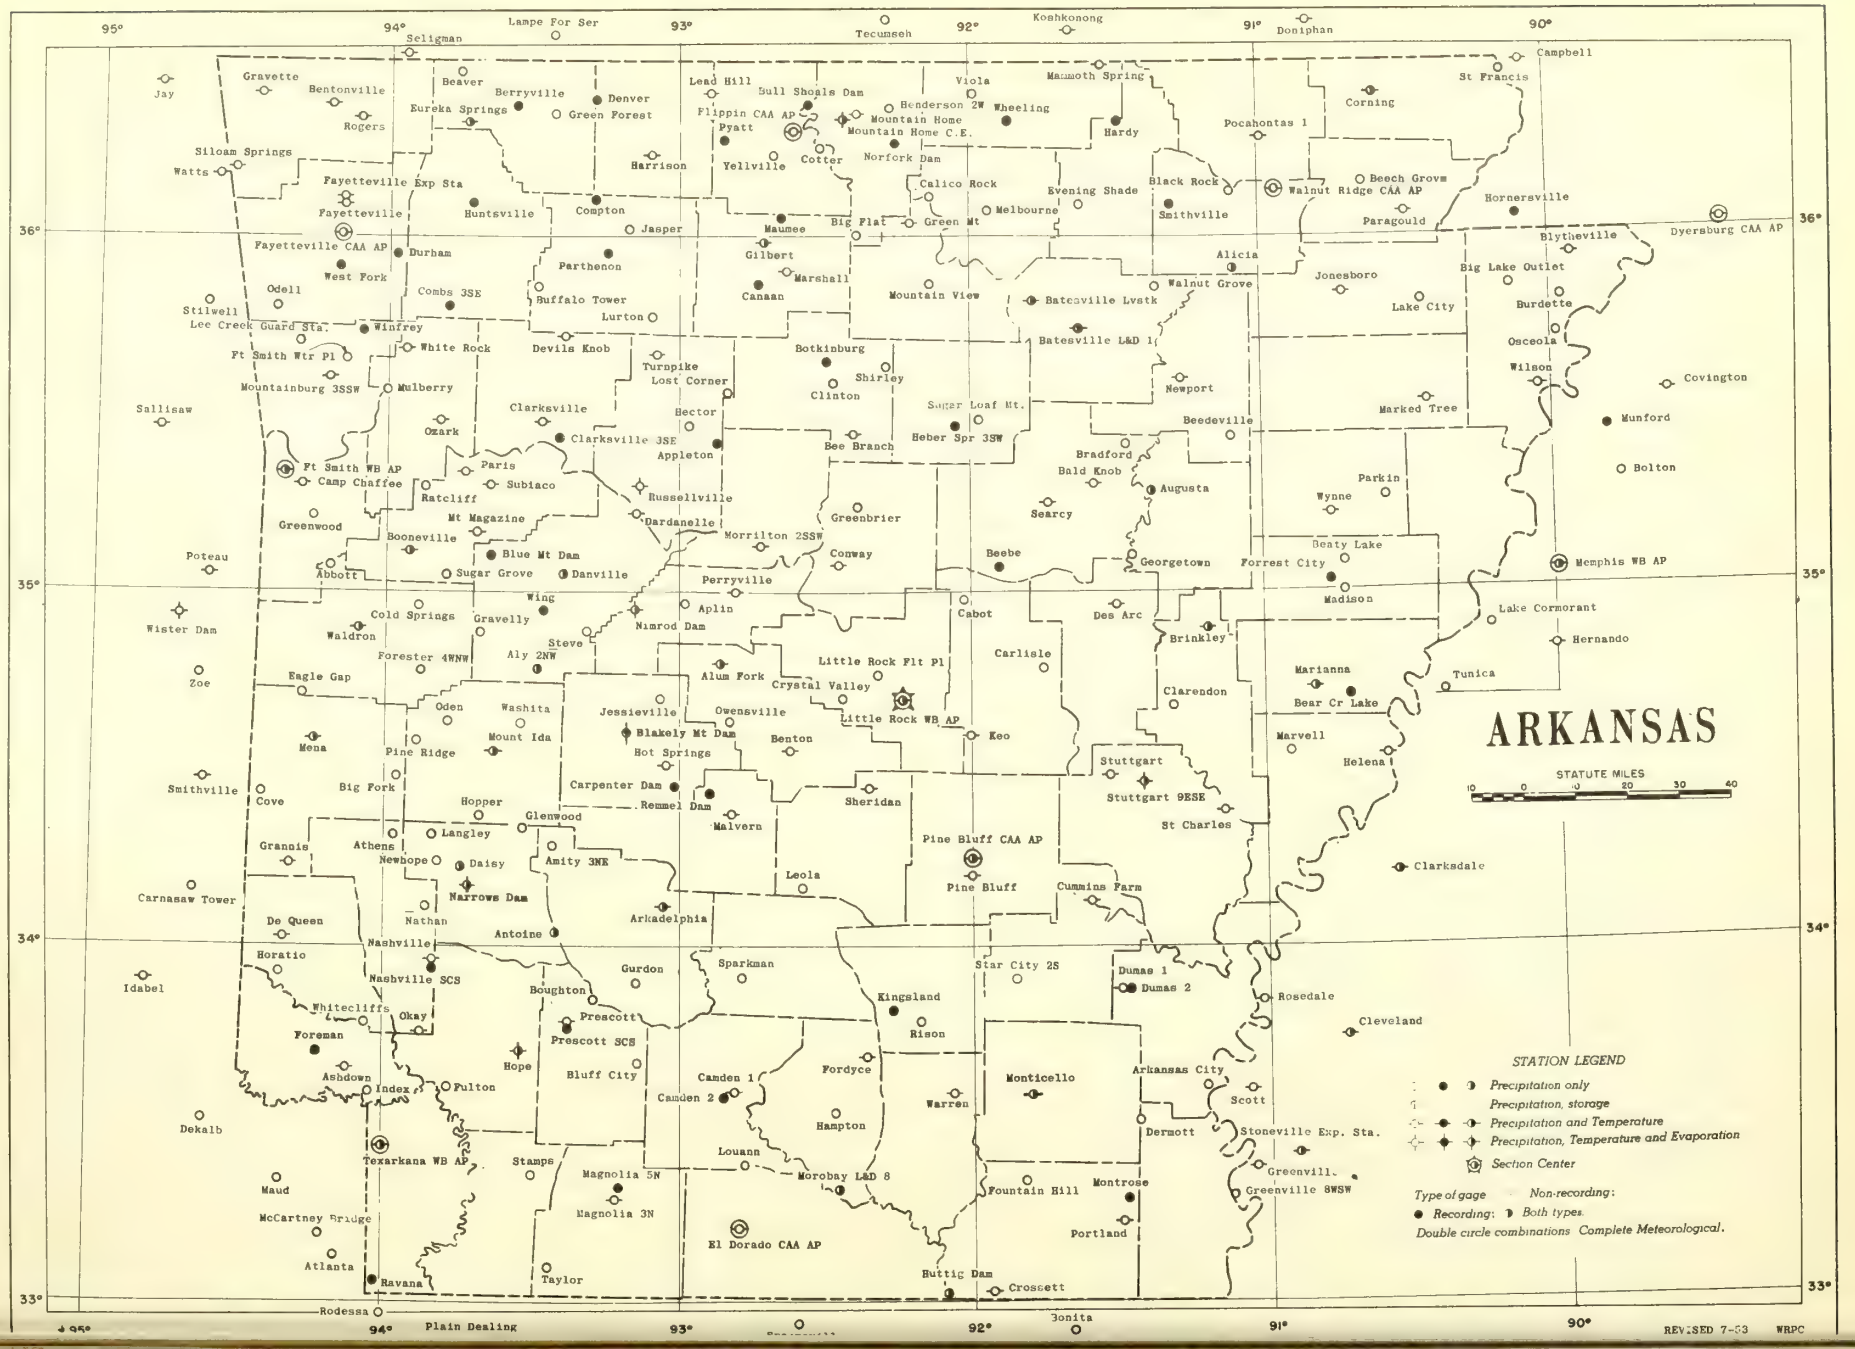
Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.



Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

| | |
|---|---|
| Ⓓ | Data in the column formerly headed "No. of Days .01 or more" have been changed to "No. of Days .10 or more" effective January 1, 1954. |
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Amounts from recording gage (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data). |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

APRIL 1954
Volume LIX No. 4

KANSAS CITY: 1954

## ARKANSAS - APRIL 1954

Walter C. Hickmon, Section Director - Little Rock, Arkansas

### WEATHER SUMMARY

April weather for Arkansas in 1954 was warm and relatively dry. It was the warmest April in Arkansas since 1896, and the second warmest of record. The monthly average temperature, 66.4°, was 4.8° above normal, and 8.7° warmer than April a year ago. Precipitation for the month averaged 4.00 inches, which is 81% of and 0.94 inch below the normal. Most sections received less than normal precipitation during the month although a number of stations in Western and Southern Arkansas received above normal amounts.

Coolest weather during the month occurred on the 1st and 2nd, when minimum temperatures were below freezing at most stations. Bentonville, with 17° on the 1st, recorded the month's lowest temperature. The remainder of the month was warm with temperatures generally above normal. The only freezing weather after the 2nd occurred on the 17th when 32° was recorded at Gilbert and Lead Hill. Maximum temperatures were in the upper 80's from the 23rd through the 27th with a few stations reporting highs in the low 90's. Camden 1, with 92° on the 24th, reported the highest temperature for the month.

The extremely dry weather of February and March continued into April until showers occurred in many sections on the 7-8th, and over most of the State from the 10th to 13th. Showers also fell in most areas on the 15-16th, and from the 27th through the 30th. Severe local storms occurred in a number of areas in connection with these showers, particularly on the 30th.

The showers were generally light, and only a few stations reported daily amounts of as much as 2.00 inches. Greatest daily rainfall reported by any station was 3.22 inches at Subiaco on the 28th. Greatest monthly rainfall reported by any station was 8.19 inches at Monticello; least reported was 1.00 inch at Washita.

There were no floods during the month. Streams of the State continued at low stages.

Small grain crops, hay, and pastures, responded nicely to the needed moisture. By the 16th most sections had sufficient moisture for current needs. Spring planting, cultivating, and other farm activities were condsiderably ahead of schedule by the close of the month.

### SEVERE STORM DATA

Losses from severe storms of all kinds, including tornadoes, windstorms, and hailstorms, totaled more than $455,000. Included in these losses were $397,700 estimated damage by nine tornadoes, $56,250 by straight winds, and $2,000 damage to crops by hail. There were no fatalities. Three persons were injured by tornadoes; two were injured by lightning.

Two of the tornadoes occurred on the 10th, one on the 28th, and six on the 30th. One of the tornadoes on the 10th occurred between 12:30 p.m. and 1:25 p.m., leaving scattered damage estimated at $15,000 over a narrow path 21 miles long between Hermitage and Warren. The other tornado on the 10th, at 4:30 p.m., caused damage of about $3,000 to a farmstead near Crossett. The tornado on the 28th at 12:30 p.m., caused minor damage in the Letchworth Community south of Des Arc.

Most of the severe storms in April occurred on the 30th. There were six tornadoes on that date, as well as wind and hail damage. One tornado entered the southwestern corner of the State at 11:00 a.m., and as it moved northeastward for 45 miles, $10,500 damage was reported in the Fouke and Bodcaw areas. About the same time, another tornado entered Southwestern Arkansas and moved northeastward for 95 miles with extensive damage in or near the following places: Schall, Mineral Springs, Nashville, Bingen, Amity, Bismarck, and Hot Springs, Greatest losses from this tornado occurred in the Nashville and Hot Springs areas. At Nashville, where the tornado hit between 11:30 a.m. and 12:15 p.m., two persons were injured, and property losses were estimated at $150,000. In the Hot Springs area where the storm struck at 12:50 p.m., there was an estimated $25,000 tornado damage--as well as about $50,000 damage by straight winds.

At 11:10 a.m. on the 30th a tornado funnel dipped to earth three times just south of and in the southern section of Fort Smith. Damage to signs and buildings was estimated at $2,000.

Damage acounting to $110,000, mostly to poultry and poultry equipment, occurred from 11:55 a.m. to 12:25 p.m. in a tornado that moved from Natural Dam, Crawford County, northeastward into Washington County through the Greenland, Harris, and Goshen Communities. One person was injured.

Another tornado at 12:30 p.m., caused about $16,000 damage to several farmsteads in a path from Hartman to west of Clarksville.

In Northeastern Arkansas, a tornado struck from 3;15 p.m. to 4:00 p.m. of the 30th over a 35 miles long path from Arbor Grove, eastern Lawrence County, to the Hoxie and Beech Grove areas in Green County. Damage was estimated at $41,200.

Wind damage on the 30th, in addition to that accompanying the tornado in the Hot Springs area, was reported in Dallas, White, and Woodruff Counties. These wind losses were estimated at $4,250. Scattered hail damage amounting to $2,000 was also reported in Woodruff County.--MOA

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

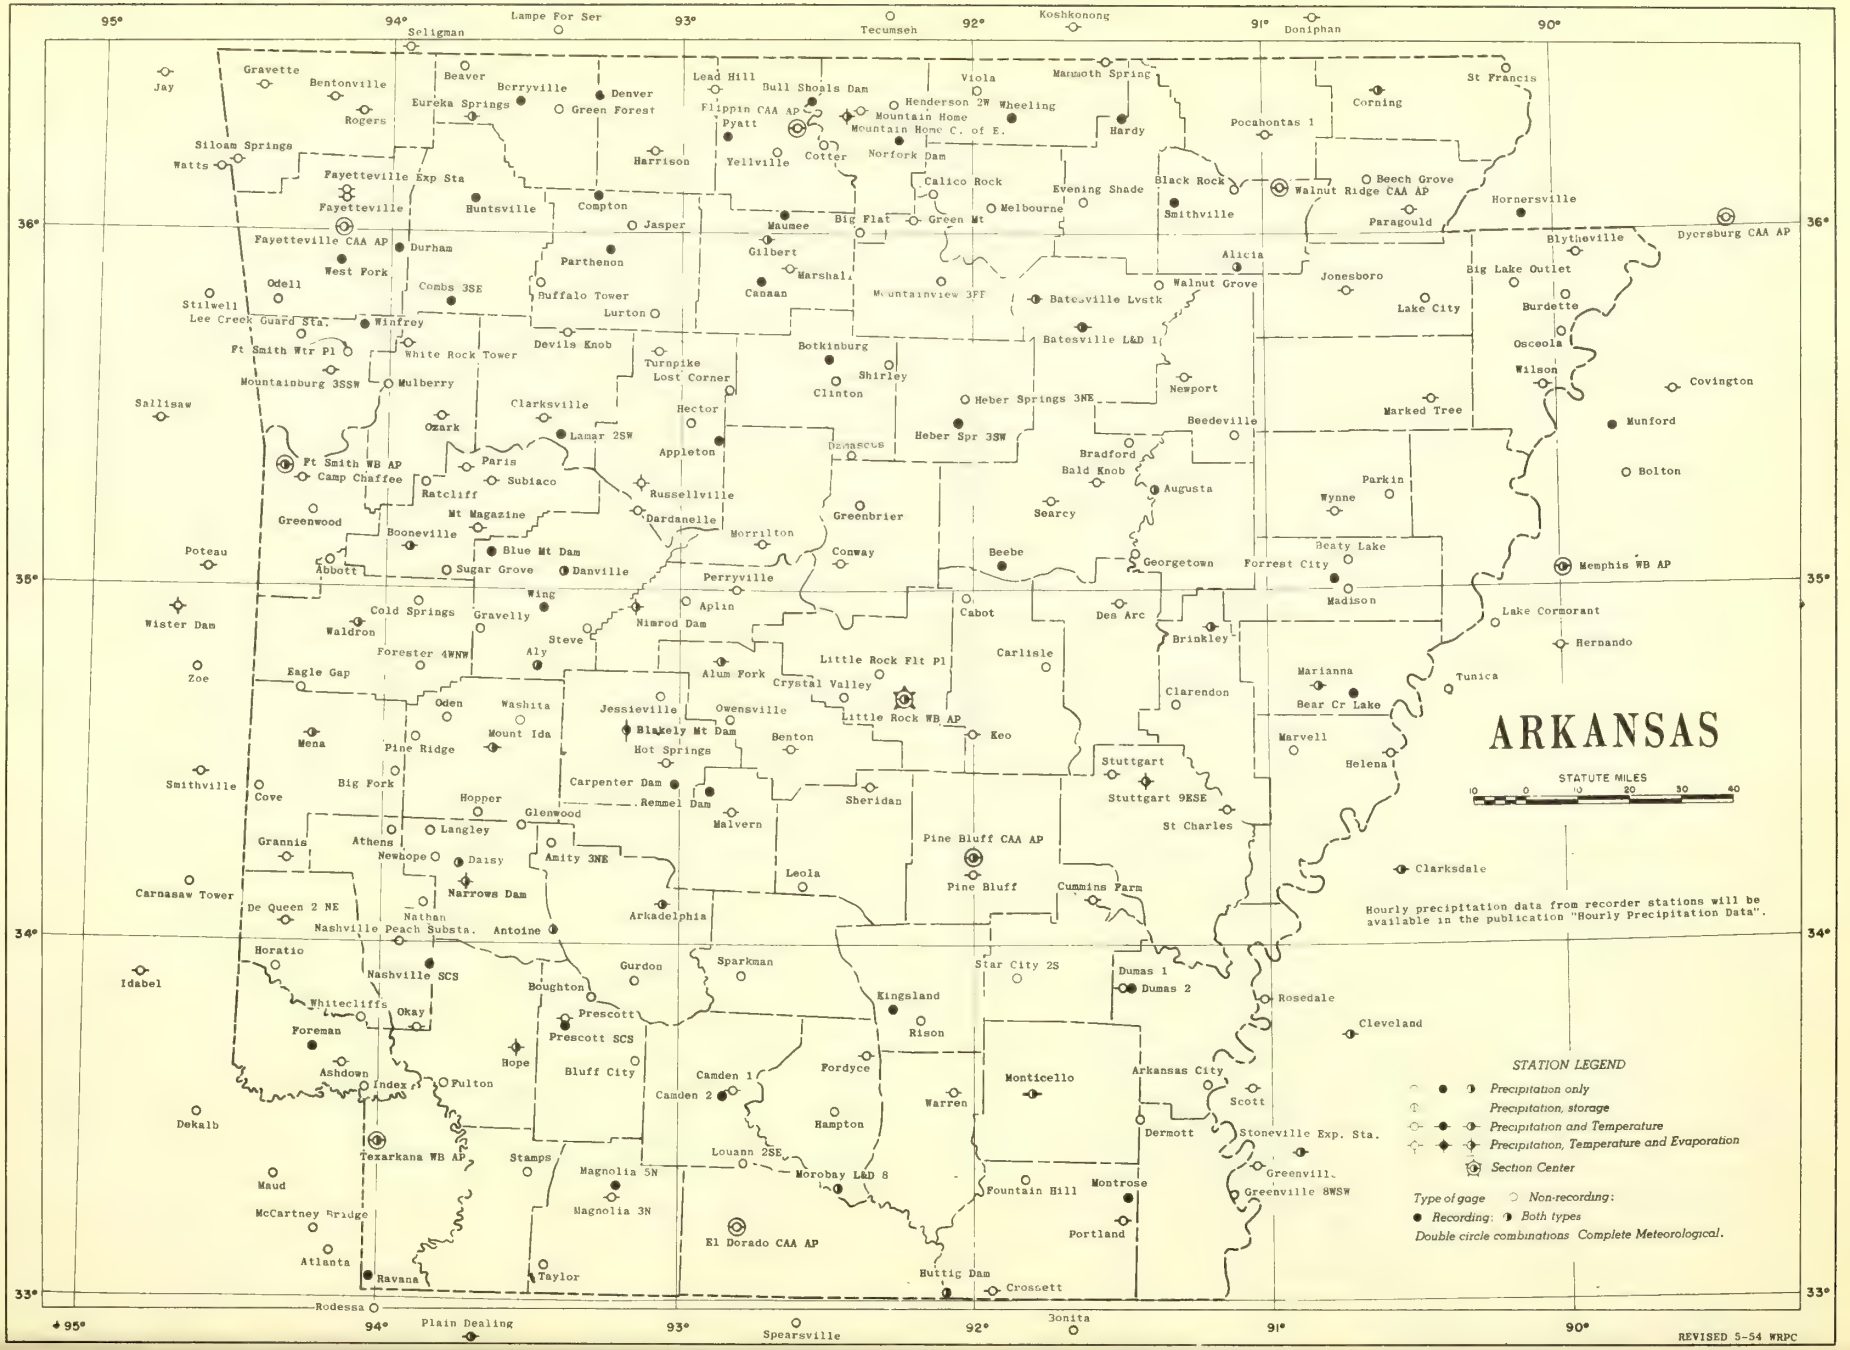
Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.



Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

| | |
|---|---|
| © | Data in the column formerly headed "No. of Days .01 or more" have been changed to "No. of Days .10 or more" effective January 1, 1954. |
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Amounts from recording gage (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data). |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## ARKANSAS

MAY 1954
Volume LIX No. 5

KANSAS CITY: 1954

ARKANSAS - MAY 1954

Walter C. Hickmon, Section Director - Little Rock, Arkansas

WEATHER SUMMARY

Heavy rains were occurring over Arkansas as the month began. Rainfall amounts for the first two days of May ranged from near an inch to more than 5 1/2 inches. Greatest daily amounts, reported on the 2nd, were 5.52 inches at Aly, and 5.45 inches at Cabot. Local flooding was reported in many areas, with heavy losses especially in the Little Rock and Hot Springs areas. One death was attributed indirectly to the heavy rains when a boy rode his bicycle into a flooded drainage ditch in North Little Rock. Roads and bridges suffered considerable damage. Much cotton needed replanting.

While rivers were in flood in many areas as a result of excessive rains, damages were negligible except for a delay in use of bottomlands for agricultural purposes.

The rains were followed by a period of cool weather with frosts on May 3rd and 4th which caused extensive damage to tender crops. Gardens and commercial vegetables, as well as the corn and cotton crops, were damaged. Temperatures were at record lows for so late in the season as minimum readings were below freezing in many areas. Lowest reading reported anywhere in the State was 26° at Green Mountain on the 4th.

Cool weather continued most of the month. It was the coolest May of record since 1924 as the monthly average temperature was 64.8°; 4.3° below normal. Maximum temperatures generally did not reach the 90's until the last two days. The highest temperature during the month was 95° at Camden, Marianna and Pine Bluff on the 30th.

While the heaviest rains, generally, fell on the 1st-3rd--showers occurred later in the month, mostly on the 7-13th, 17-18th, and 26-28th. The showers on the 9-13th were heavier in southern sections of the State while those on the 26th-29th were generally heavier in central areas. The showers on the 17th-18th were scattered throughout the State but amounts were less than an inch.

Cotton and corn made poor growth because of the cool, wet weather, The weather was, however, favorable for pastures. Cattle made excellent gains. At the close of the month, soil moisture supplies were adequate to excessive except in some northern areas where additional rainfall was needed.

The monthly average precipitation for the State was 5.43 inches, which is 0.32 inch above or 106% of normal. Portland, with 10.93 inches, reported the greatest amount during the month. Crystal Valley recorded 10.15 inches. Lead Hill, with 2.17 inches, registered the least. Other stations recording less than three inches of rain in May were Alum Fork, Fort Smith, Keo, Marianna, Melbourne and Ratcliff.

SEVERE STORM DATA

Extensive damage to crops and property occurred as a result of hail, heavy rains, lightning, tornadoes, and wind storms, on the 1st-2nd, 9th, 29th, and 31st. There were no deaths or injuries directly attributed to the storms.

There were five tornadoes during May, four of which occurred on the 2nd, and one on the 25th.

The first of the tornadoes on the 2nd occurred at 6:30 a.m. in Miller County where three farmsteads were damaged with losses estimated at $3,500.

Another tornado was reported at Oklona, southwest of Arkadelphia, at 9:15 a.m. where two barns and other buildings were damaged. Later, in what was believed to be the same tornado, several houses and a number of trees were damaged to the north of Arkadelphia.

Several buildings were damaged, with an estimated $3,000 loss in a tornado that occurred in Eastern Mississippi County at 9:30 a.m.

The last tornado on the 2nd occurred at 11:00 a.m. near Stuttgart where there was considerable damage. It was reported that this tornado sucked concrete blocks, supporting a grainery, out of the ground, and that it carried objects such as tree limbs and window glass for considerable distances.

On the 31st several persons reported observing a tornado funnel aloft at 7:50 p.m. near Harrison, Boone County.

The most destructive storm of the month was reported shortly after midnight on the 29th in Howard County where hail, marble to golf ball size, caused extensive damage over much of the county. Damage to property was estimated at $50,000, and to crops at $450,000, according to the County Agent. Other hailstorms on the 29th were reported in Lawrence, Randolph, and Sevier Counties. Losses totaled $3,000.

Hail with extensive damage to truck crops, gardens, and cotton, was reported on the 1st and 2nd in a number of areas in Central Arkansas. Hail was also reported in Madison County on the 31st where damages to crops were estimated at $1,500.

Damage by lightning was reported near Dardanelle on the 1st where a chicken-house with 6,000 chickens was destroyed by fire; and near Nashville on the 9th where 5 cattle in a pasture were killed.--MOA

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

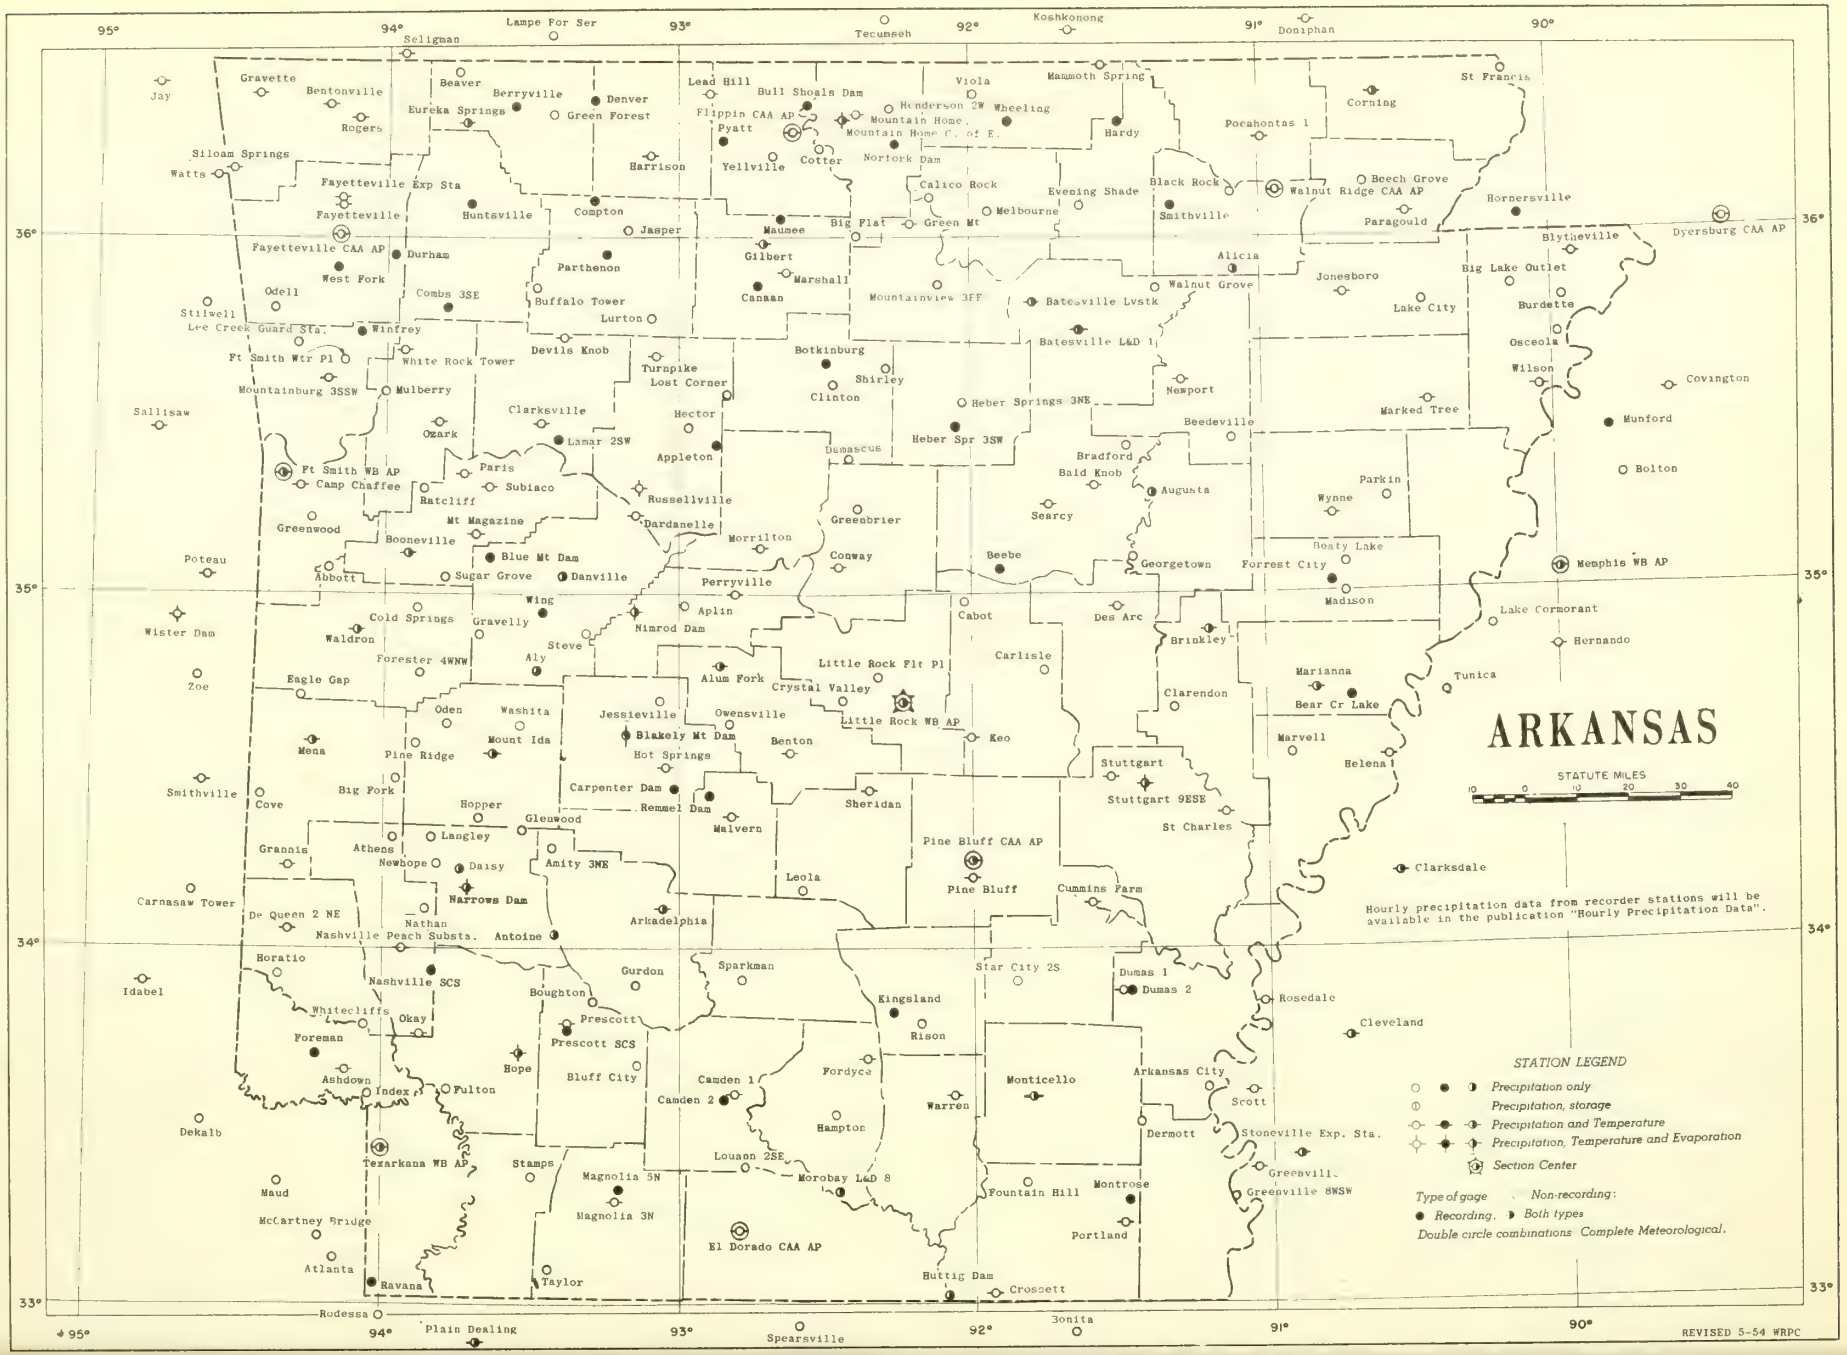
Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.



Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

| | |
|---|---|
| Ⓓ | Data in the column formerly headed "No. of Days .01 or more" have been changed to "No. of Days .10 or more" effective January 1, 1954. |
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Amounts from recording gage (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data). |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

# CLIMATOLOGICAL DATA

## ARKANSAS

JUNE 1954
Volume LIX No. 6

KANSAS CITY: 1954

## ARKANSAS - JUNE 1954

Walter C. Hickmon, Section Director - Little Rock, Arkansas

### WEATHER SUMMARY

June 1954 over Arkansas was hot and dry. The monthly average temperature for the State was 79.6°, which is 2.5° above normal. Monthly precipitation for the State averaged 1.28 inches--2.83 inches below, or 31% of the normal.

This was the third year in succession with June much hotter and drier than normal. While the hot and dry trend for June continued this year, the month was not so hot nor so dry as in 1952 and 1953.

June 1954 began with near normal temperatures. Minimum temperatures from the 3rd through the 6th were generally in the 40's in the northwestern part of the State, and in the 50's in other sections. Maximum temperatures were in the 80's. The lowest temperature for the month was 40° at Green Mountain on the 5th.

By the 8th, temperatures warmed up and for the remainder of the month above normal temperatures prevailed with maximum temperatures generally above 90° each day. Between the 25th and 29th, maximum temperatures exceeded 100° at most stations. Minimum temperatures were generally in the 70's. The highest temperature reported anywhere in the State was 107° at Conway on the 28th and at Searcy on the 27th.

Scattered showers occurred on the 1st-3rd, 8th-9th, 13th, 15th-19th, 22nd-23rd, and 29th-30th. The showers were generally light. Only five stations reported daily rainfall amounts of two inches or more--Green Mountain and Shirley on the 23rd, Cabot on the 29th, and Oden and Washita on the 30th. Greatest daily amount reported was 2.33 inches at Shirley on the 23rd. Only four stations--Lead Hill with 4.36 inches; Cotter, 4.27 inches; Shirley, 4.15 inches and Washita with 4.25 inches--reported monthly totals over 4 inches. About 40% of the stations received less than an inch of rain during the entire month, of which eleven stations reported less than one-fourth inch. Sparkman received no rain at all.

There was progressive deterioration of crops and pastures because of the dry, hot weather. The moisture condition had not reached a critical stage by the close of the month, although inadequate moisture together with extreme heat was proving to be damaging to crops such as corn, sorghums, late hay, vegetables, and pastures in many areas. Generally, however the cotton crop had not suffered. According to the State Forestry Department on June 25th, forested areas were becoming dangerously dry.

### SEVERE STORM DATA

Hail, tornado, wind, and electrical storm losses totaled $424,125 during the month. One death and one injury were reported. There were three tornadoes.

A tornado damaged eleven houses in Mississippi County on the night of the 2nd, with property losses estimated at $6,000. One person was injured.

Hail and wind losses in Randolph and Clay Counties on the afternoon of the 8th were estimated at $10,000 by hail to crops and $17,000 wind damage to buildings.

A tornado, wind, and hail storm between 2:00 p.m. and 2:30 p.m. on the 13th between the Black Oak area in Craighead County and Sandy Bayou and Kaiser in Mississippi County, caused damages of about $14,000 to property and $20,000 to crops. Another storm on the afternoon of the 13th was reported near Atkins, Polk County, where losses were estimated at $10,000.

The most damaging storm of the month occurred on the afternoon of the 16th in Craighead and Mississippi Counties where crop damage to cotton, corn, and soybeans by hail was estimated at $290,000; wind damage to several barns amounted to $20,000; and, electrical losses totaled $7,500.

Electircal storms on the 22nd caused a $20,000 loss by fire to a church at Sage, Izard County, and on the 29th a man was killed at Austin, Conway County, when lightning struck a fence he was holding.

The third tornado of the month occurred at Paragould on the afternoon of the 29th. In this storm, $8,000 damage by the tornado was reported as well as a $500 loss by lightning.--MOA

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

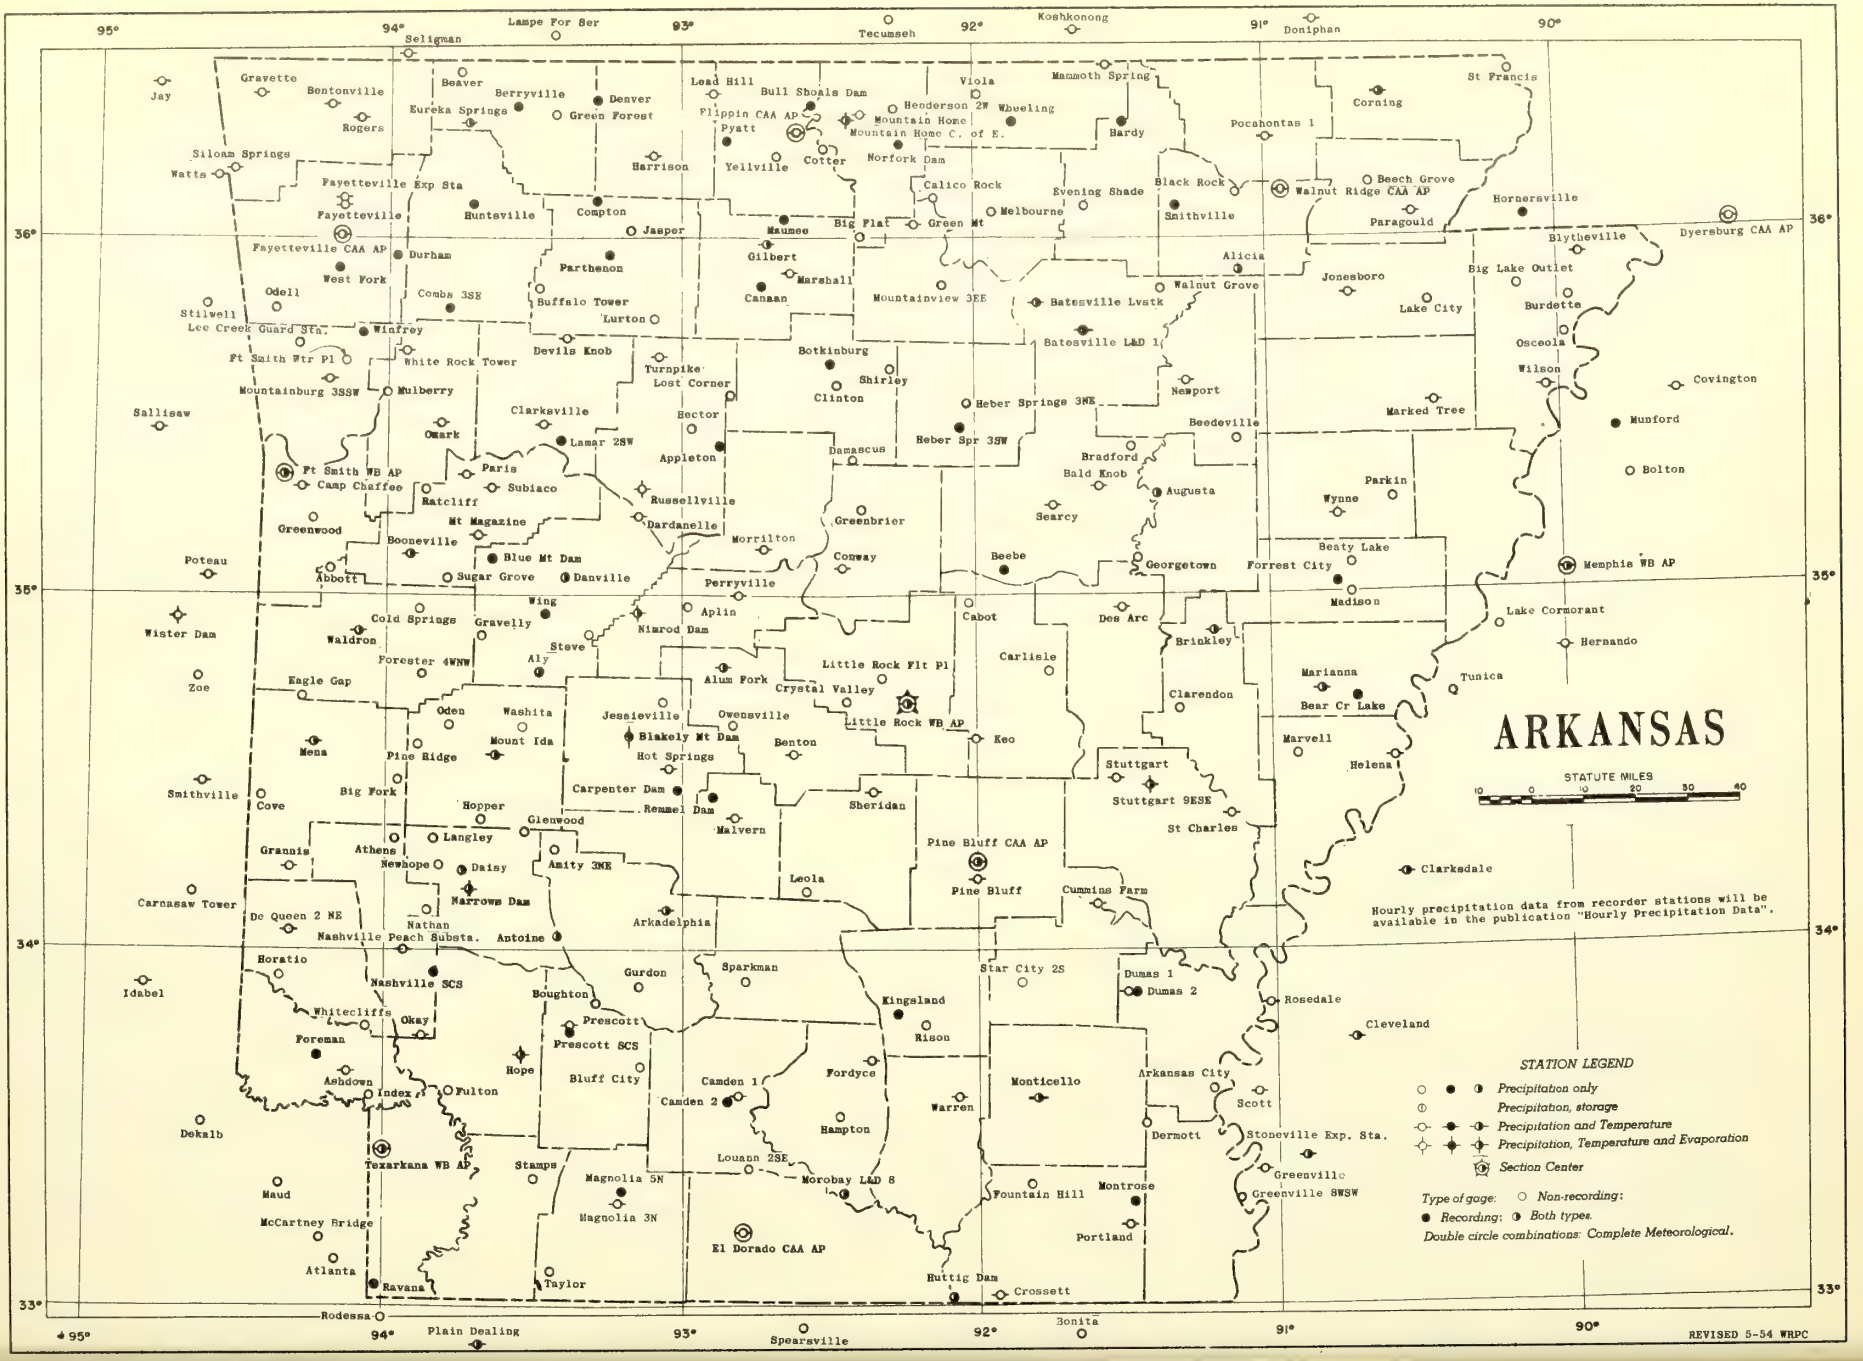
Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

| | |
|---|---|
| Ⓓ | Data in the column formerly headed "No. of Days .01 or more" have been changed to "No. of Days .10 or more" effective January 1, 1954. |
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data). |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.



WRPC, KANSAS CITY, MO. -- 8-16-54 -- 1005

## CORRECTIONS

April 1954: Des Arc, Table 2, high should be 89 on the 28th.

Mountainburg 3 SSW, Table 2, high date should be 5+.

Wynne, Table 2, greatest day should be 1.06 on the 27th.

JULY 1954

Volume LIX No. 7

KANSAS CITY: 1954

## ARKANSAS - JULY 1954

Walter C. Hickmon, Section Director - Little Rock, Arkansas

### WEATHER SUMMARY

Hot, dry, weather, which prevailed in June, continued through July. July 1954 was the hottest month on record in the State. The monthly average temperature was 85.8°, which is 5.3 above normal--5.6° hotter than July a year ago, and 0.3° higher than any previous month of record. The previous hottest month was July 1934 with an average temperature of 85.5°.

Temperatures at all stations in the State averaged from 2° to 8° above normal. Temperatures of 103° or higher were recorded at all stations, and about half the stations recorded monthly highs of between 110° and 116°. The highest temperature recorded anywhere in the State during the month was 116° at Ozark on the 13th, equaling the all-time high temperature record for July, established at Jonesboro on July 12, 1901.

It was hot throughout the month, although there was some slight moderation on the 10-11th, and again on the 29th. The lowest temperature for the month was 53° at Batesville Livestock Experiment Station on the 10th.

Rainfall over the State averaged 1.55 inches, which is 2.19 inches below, or 41% of the normal. It was the driest July since 1947, and the sixth driest of record. Monthly precipitation totals ranged from 5.14 inches at Ashdown to 0.03 inch at Dardanelle. All precipitation occurred in the form of showers, principally on the 18-19th, 22-25th, and 30th. Most of these showers were light, although a few areas received amounts ranging from two to more than three inches. Greatest daily rainfall reported was 3.54 inches at Pine Bluff C.A.A. Airport on the 18th, and 3.41 inches at Hope on the 19th.

The heat together with deficient rainfall caused severe damage to corn, soybeans, pastures, hay, and vegetable crops. The feed crop situation was serious. While cotton generally made good progress, the crop was beginning to suffer in some areas by the close of the month. Forests were extremely dry; the fire hazard became increaslingly critical. Livestock and poultry suffered. Many chickens died as a result of the heat. Water shortages became more general. Showers that occurred provided only temporary relief in local areas.

### SEVERE STORM DATA

Property losses from severe local storms during the month totaled $183,460. Included in the total were wind losses estimated at $86,660; hail damage of $3,500 to property and $39,200 to crops; tornadoe damage of $5,000; and, losses caused by lightning estimated at $49,100.

One fatality was reported when a woman standing near a clothesline in Foreman was killed by lightning on July 19th. Three persons were injured as a result of windstorms.

Two tornadoes were reported. The first occurred at 6:30 p.m. on July 8th in the Haw Creek community, west of Waldron, Arkansas. The second occurred at 5:30 p.m. on the 19th at Kingsland.

The most damaging hailstorm of the month occurred northwest of Nashville on the evening of the 13th when $3,000 hail damage to buildings, and $25,000 damage to row crops and peaches was reported. In this storm there was also $2,000 wind damage to buildings.

In the Pine Bluff area on the 18th crop damage by hail was estimated at $5,000. Damage due to lightning striking several houses, was estimated at $40,000.

On the afternoon of the 24th at Beebe, winds estimated at 90 m.p.h., continued for about 30 minutes and damaged practically every section of the town. Losses were estimated at $40,000.--MOA

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

| | |
|---|---|
| Φ | Data in the column formerly headed "No. of Days .01 or more" have been changed to "No. of Days .10 or more" effective January 1, 1954. |
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data). |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## ARKANSAS

AUGUST 1954

Volume LIX No. 8

KANSAS CITY: 1954

## ARKANSAS - AUGUST 1954

Walter C. Hickmon, Section Director - Little Rock

### WEATHER SUMMARY

Extremely hot, dry weather in August 1954 culminated one of the hottest and one of the driest summers of record for Arkansas. The monthly average temperature for the State was 85.3°, which is 5.3° above the normal. Precipitation averaged 1.53 inches, which is 2.06 inches below, or 43% of normal.

It was the hottest August of record in Arkansas since 1891, and it followed the hottest July of record for the State. Only July 1954 with an average temperature of 85.8°, and July 1934 with 85.5°, were hotter than August 1954.

Maximum temperatures of 100° or higher were recorded at every station in the State--station highs ranging from 100° at Turnpike, to 111° at Conway on the 16th, at Arkadelphia on the 29th and 30th, and at Hot Springs on the 30th. The lowest temperature recorded during the month was 55° at Bentonville on the 9th.

It was hot throughout the entire month. Except for the 1st and 2nd, maximum temperatures of 100° or higher were recorded at a number of stations each day. On several dates, particularly on the 7th, 17-19th, and 28-29th, practically all but a few mountaintop stations registered 100° or higher temperatures.

Precipitation during the month occurred as widely scattered showers, principally on the 1-3rd, 21-23rd, and 28-30th. While a number of stations--Bradford with 5.92 inches, Marshall 5.78 inches, Marianna 4.72 inches, Green Mountain 4.29 inches, Calico Rock 4.50 inches, and Hector 4.74 inches --received more than four inches of rain during the month, most stations recorded less than two inches. Louann 2 SE and Okay received no rain at all, and six stations recorded only sprinkles too light to measure.

It was the second hottest summer of record. The average temperature for the three months of June, July, and August, 1954 was 83.6°. The only other summer with the three-month average temperature above 83.0°, was in 1934 when the June-August average was 83.8°. Normal average temperature for the three-month period is 79.2°.

It was the second driest summer of record. Average precipitation for the three months of June, July, and August 1954 totaled 4.36 inches. Only 1930, when the three-month total was 4.14 inches, was drier. Normal June-August rainfall in Arkansas is 11.44 inches. During the three months a large area in the central part of the State received less than 1/3 of the normal amount. Extreme Southern Arkansas, as well as a number of areas in other sections of the State, also received less than 33% of the normal. Only a few scattered areas received more than half the normal amount. No station received normal rainfall during the three-month period.

The searing heat, combined with the deficient rainfall, caused one of the most severe droughts of record for the State. All counties in the State, except for Arkansas County in the irrigated rice and cotton area of East-Central Arkansas, were applying for drought relief. With hay crops and pastures in extremely poor condition, and with serious water shortages in some localities, marketing of cattle was heavy. The corn crop was severely damaged, and much of it was burned beyond recovery. While soybeans were benefited in a few areas from the scattered showers, the crop was generally deteriorating. Cotton was opening rapidly, and in many instances prematurely.

Forest fires destroyed thousands of acres of timberland. High temperatures, lack of moisture, and extremely low humidities caused forests to be described by the State Forestry Commission as the "most explosive condition in 20 years."

All streams in the State were at extremely low stages. Stages were near or below the lowest ever recorded. Reservoirs at Bull Shoals and Norfork Dams in the northern part of the State were at their lowest of record and below the normal bottoms of their respective power pools.

Municipal water supplies in a number of cities were dwindling dangerously--especially in the western portion of the State.

### SEVERE STORM DATA

Severe local storms occurred on the 19th, 28th, 29th, and 30th, and accounted for property losses estimated at $122,000. Most of the damages occurred in Northeastern Arkansas on the 19th where wind damages amounted to about $72,000, hail damage to cotton, soybean, and rice crops was about $20,000, and damages by lightning about $7,000. On the 28th, one man was killed by lightning while he was closing windows in his home east of Calico Rock.

One tornado was reported during the month. It occurred at 10:30 p.m. on the 29th in Sevier County as it dipped down four times in its 7 mile long path. The American Red Cross reported 2 homes and 6 other buildings were damaged. Losses were estimated at $18,000.

On the 30th a sawmill at Hatton, Polk County, was damaged by a windstorm with losses totaling about $5,000.--MOA

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

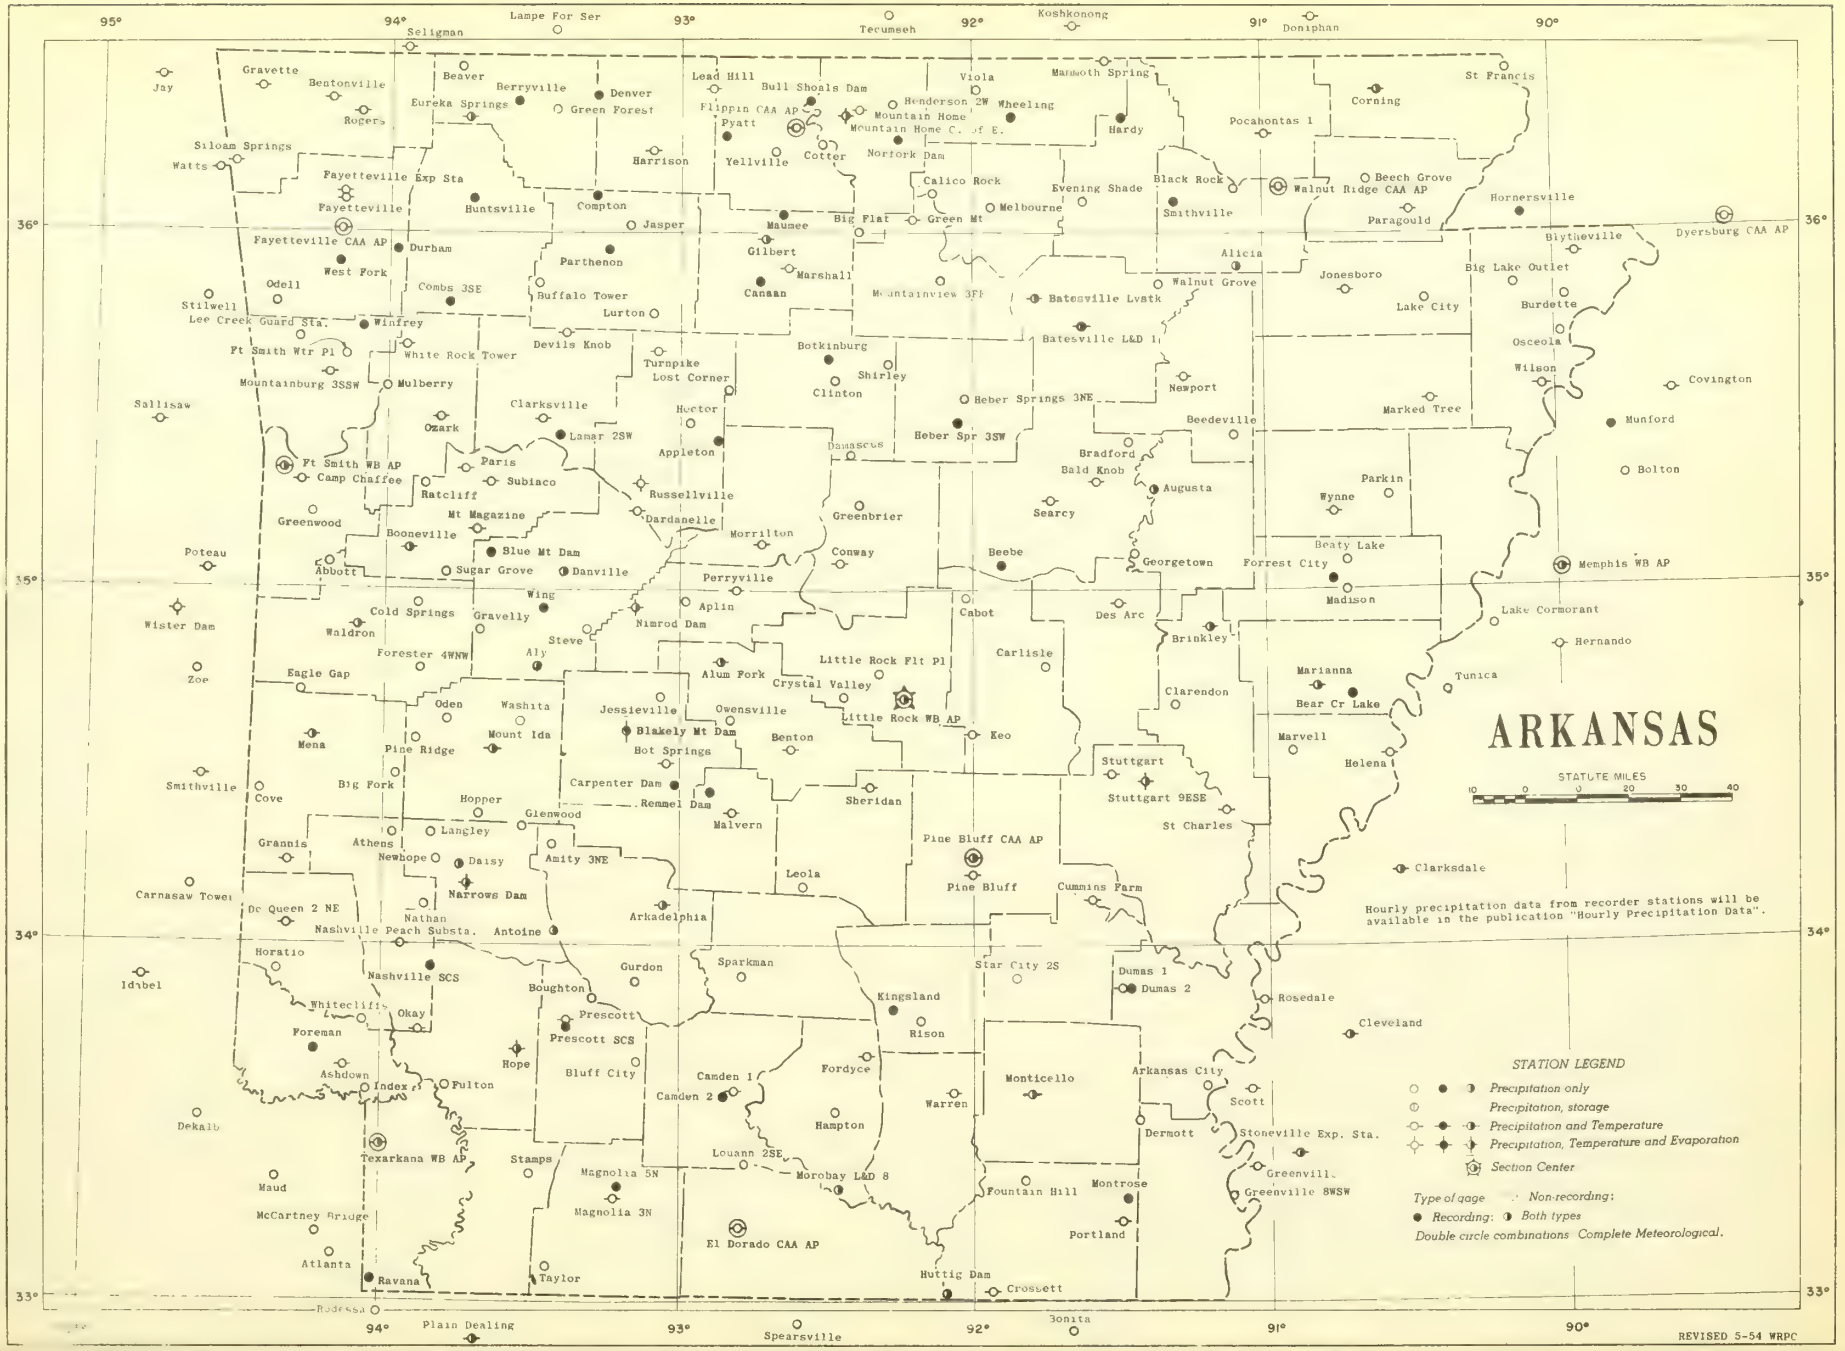
Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.



Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

| | |
|---|---|
| © | Data in the column formerly headed "No. of Days .01 or more" have been changed to "No. of Days .10 or more" effective January 1, 1954. |
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data). |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 20 cents per copy; monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

# CLIMATOLOGICAL DATA

## ARKANSAS

SEPTEMBER 1954

Volume LIX No. 9

KANSAS CITY: 1954

## ARKANSAS - SEPTEMBER 1954

### WEATHER SUMMARY

Drought conditions persisted through the month and this was tne warmest September since 1938. Temperatures averaged above normal at all stations. Only a few stations in the northwest and southwest portions and some widely scattered areas elsewhere received from three to five inches of rain, but still insufficient for current needs. Elsewhere the below-normal rainfall with the greatest deficiencies of 2 to 3 inches in the east central counties, intensified the already critical situation. Generous showers as the month closed brought some relief from the drought but slowed harvest activities.

The average temperature for the State, 77.3°, was 3.2° above normal. The mean temperatures at individual stations increased from 72.8° at Bentonville to 81.3° at Hot Springs with the greatest departures, 4° or 5° above normal, in the central and northwest. The highest temperatures occurred the first few days, during which the hottest 109°, occurred at Arkadelphia and Mammoth Spring on the 3d. Two short relatively cool spells occurred on the 11th and 12th, and the 21st to 23d. The lowest temperatures at most stations were on the 22d or 23d and Bentonville recorded 37°, the extreme for the State, on the 22d.

Rainfall averaged 2.62 inches, 0.70 inch less than normal. The driest area was along the east central border where most stations received from two to three inches less than normal amounts. Marianna, in the middle of this area, received only 0.31 inch, the least rain of all the stations. Rains were spotty in the southwest where monthly amounts ranged from 0.62 inch at Fulton, Sparkman, and Stamps to 5.31 inches at Mena, 5.51 inches at Glenwood, and 5.69 inches at Cove. Rains exceeded four inches at a few stations in the northwest and west central, and Eureka Springs received 6.17 inches, the greatest monthly total in the State. Widespread rains on the last two days of the month, the first of a general nature since May, benefitted late sorghums and soybeans, pastures, and vegetables, replenished stock ponds, and provided much needed moisture for the growth of winter grains. The rains, however, slowed the harvest of cotton, rice, soybeans, and corn.

The many fair days promoted cotton picking but the heat opened the bolls prematurely. Because of the hot dry weather, soybean pods did not set resulting in poor yields. Rice promised a good crop. Low corn yields were indicated but sorghums improved some. The general rains of the last days improved pastures and replenished stock water supplies but drought conditions over most of the State persisted as the month closed. Cattle were on winter rations with feed conditions critical and marketings heavier than usual.

No severe storms were reported and the Arkansas River at Van Buren dropped to a record daily low of 0.4 foot and a record low monthly stage of 1.0 foot which is 7.0 feet below normal.

L. W. Dye

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

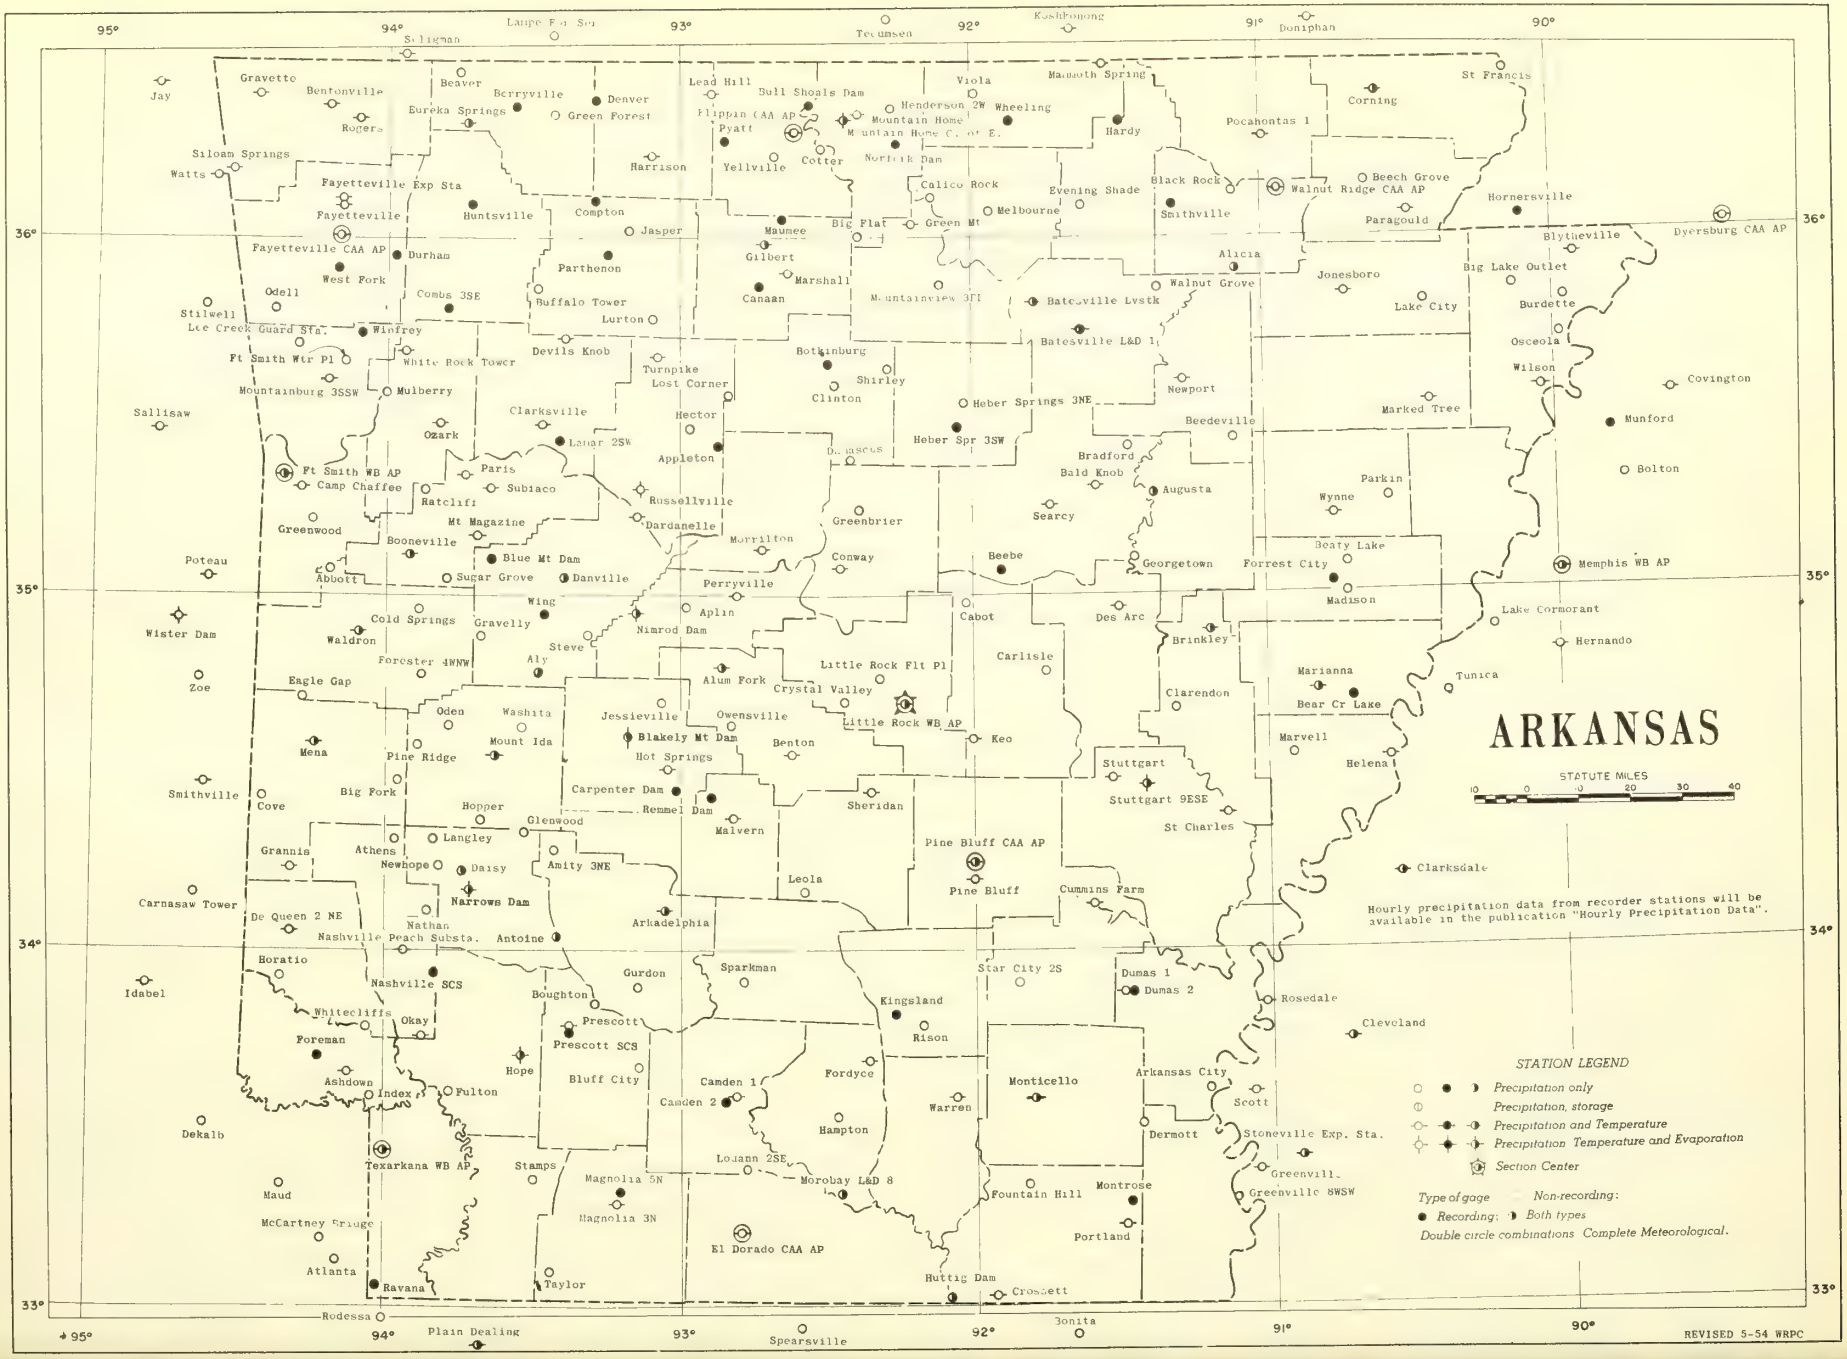
Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.



Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

| | |
|---|---|
| Ⓓ | Data in the column formerly headed "No. of Days .01 or more" have been changed to "No. of Days .10 or more" effective January 1, 1954. |
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data). |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 20 cents per copy; monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

## ARKANSAS

OCTOBER 1954

Volume LIX No. 10

KANSAS CITY: 1954

## ARKANSAS - OCTOBER 1954

### WEATHER SUMMARY

October weather was favorable for harvesting and maturing late crops. Temperatures were above normal 1 to 2 degrees over most of the State while precipitation was near normal to about an inch below over the eastern half. The western half was above normal one to three inches in the north and two to seven inches in the south. No freezing temperatures occurred until the last two days when most stations had minimum temperatures around the 30 degree mark.

Above normal temperatures prevailed most of the first half and below normal the last half. The periods of warming were from the 1st to the 6th, the 8th to the 13th, and the 25th to the 26th. Highest readings were generally in the east and south with the highest maximum, 98 degrees recorded at Batesville L and D 1 on the 2d and at Crossett on the 3d. Periods of cooling were from the 14th to the 21st and the 27th to the 31st. Lowest readings were mostly in the north and northeast with the lowest minimum, 24 degrees at Bentonville and Cummins Farm on the 30th. Magnolia 3 N had the highest mean temperature, 68.3° and Bentonville the lowest with 59.3°. Below freezing temperatures on the 30th and 31st terminated the growing season over the State.

Rainfall was general at the beginning of the month with the storm totals from 1 to over 7 inches. Another period of widespread precipitation occurred on the 11th and 12th with storm totals up to around 4 inches. Lesser amounts fell on the 21st and 22d and during the period of the 24th to the 27th. Monthly totals were considerably above normal over much of the western portion. Amounts totaling 2 to 4 inches above normal were common there while in the southwest several stations reported 6 or 7 inches above normal for the month. Some of the larger totals recorded were: 14.24 inches at Horatio, 13.62 at Daisy, 13.46 at Langley and Ashdown, and 13.17 at Athens. In contrast the eastern portion was less fortunate, receiving amounts generally up to one inch below normal with three stations, Wynne, Parkin and Marked Tree receiving more than two inches below normal. Exceptions were Jonesboro in the northeast with 1.90 inches above normal and Arkansas City in the southeast recording 1.20 inches above normal. Horatio in the extreme southwest recorded the greatest monthly total, 14.24 inches and Parkin in the east central was least with a total of only 0.94 inches. The State average precipitation was 4.97 inches, a departure of 1.74 inches above normal.

Although October weather was favorable for harvesting and maturing late crops the total production of principal field crops this year is indicated at 8 percent below the 1943-52 average, according to the Crop Reporting Service of the Department of Agriculture. Drought conditions earlier reduced soybean yield prospects but conditions improved late in the season. With only light frosts reported until late in the month, late hay crops and sorghums made good growth. Stock water was adequate and pastures were furnishing good grazing.

M. G. Talcott

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

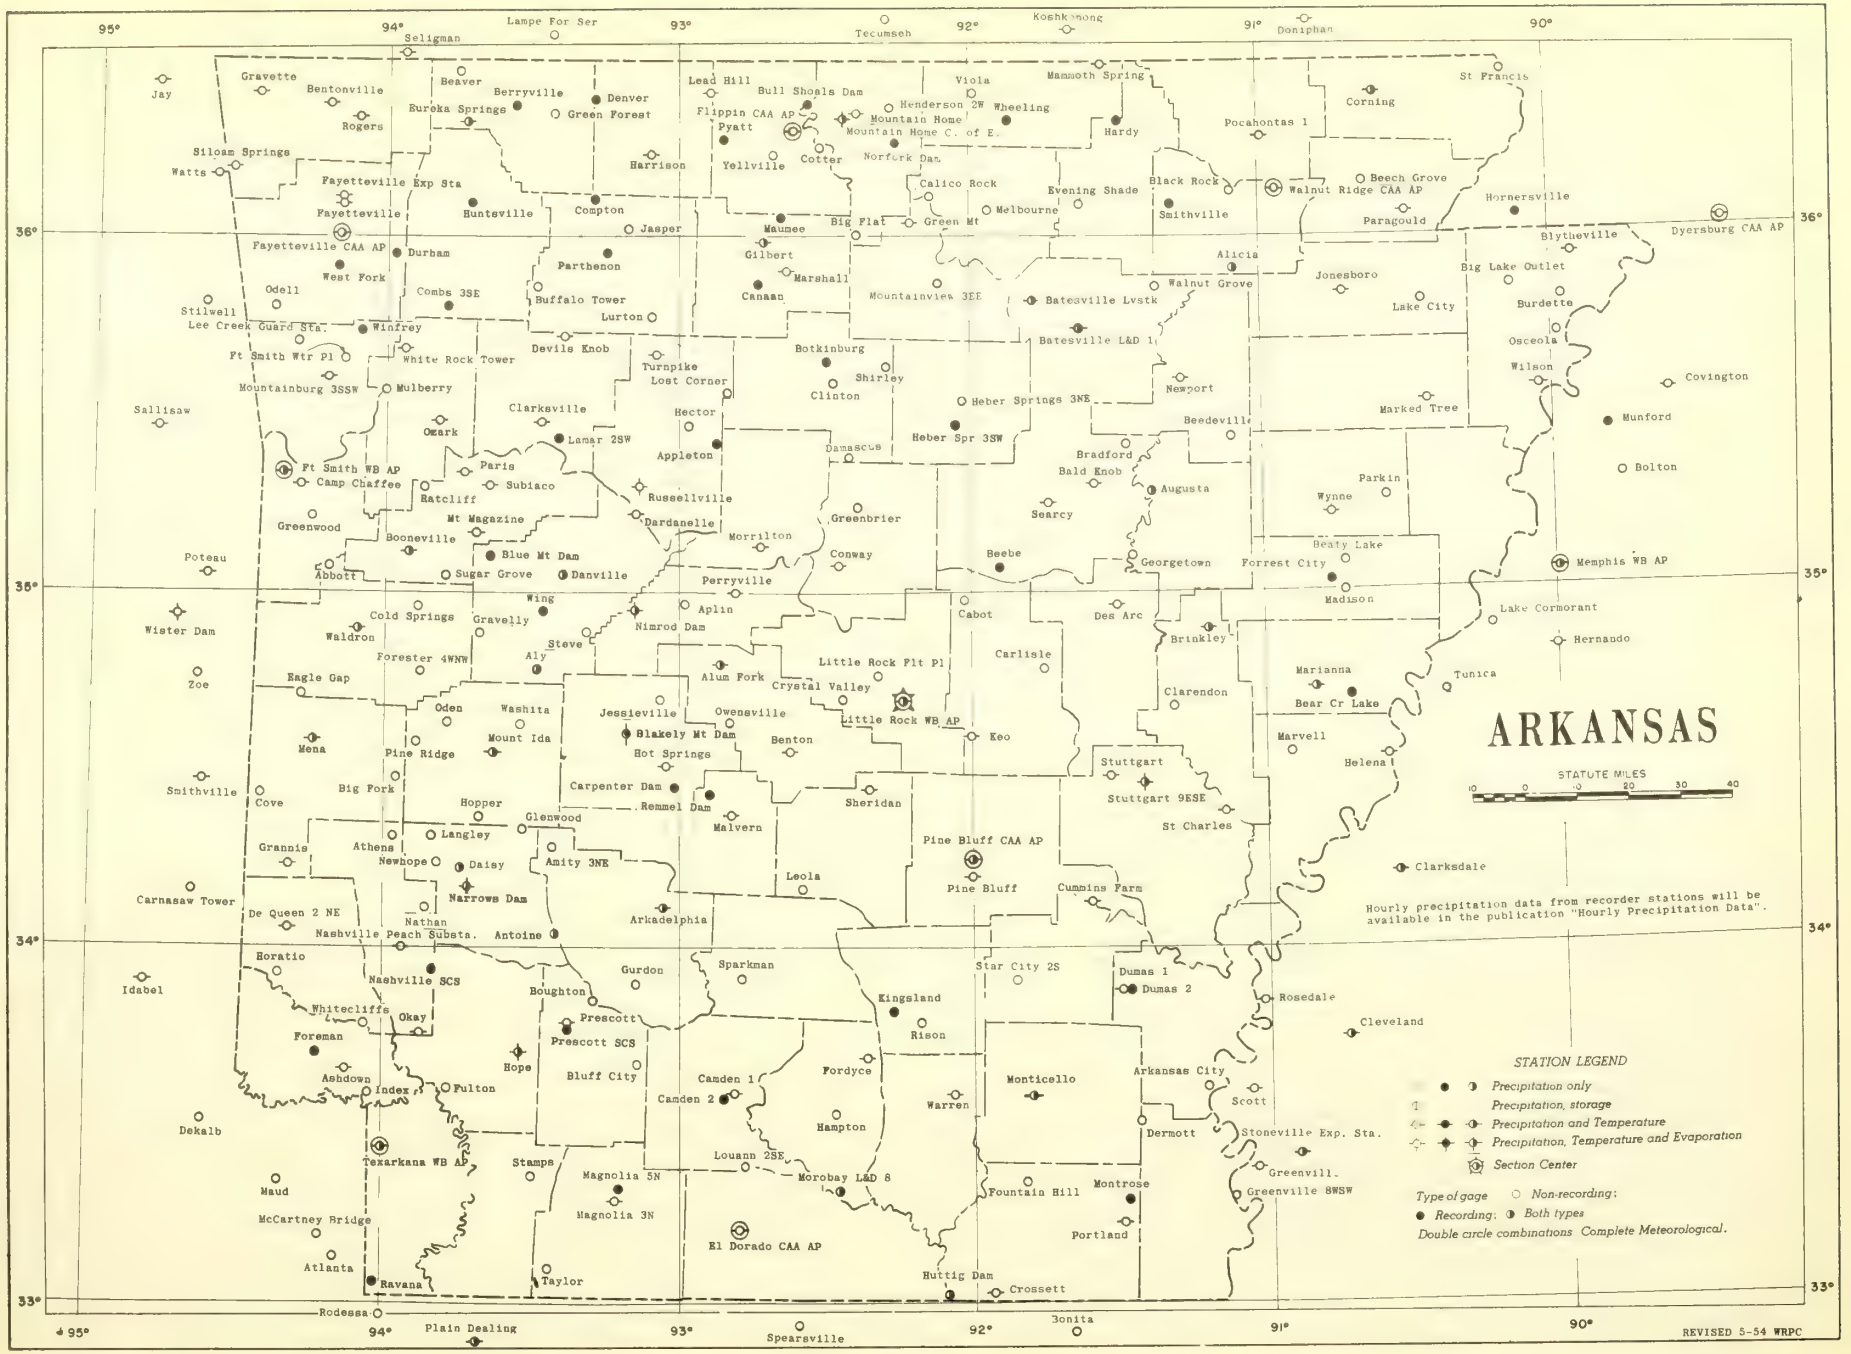
Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.



Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

| | |
|---|---|
| Φ | Data in the column formerly headed "No. of Days .01 or more" have been changed to "No. of Days .10 or more" effective January 1, 1954. |
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data). |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 20 cents per copy; monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

# CLIMATOLOGICAL DATA

## ARKANSAS

NOVEMBER 1954
Volume LIX No. 11

ASHEVILLE: 1955

## ARKANSAS - NOVEMBER 1954

### WEATHER SUMMARY

Temperatures averaged near normal and rainfall far below normal with deficiencies exceeding three inches over a large central area. The weather was ideal for outdoor activities but the soil was becoming extremely dry, and winter rains were badly needed to replenish the soil moisture for next year's crops.

The first six days were quite chilly. Temperatures on the 2d and 3d averaged about 20° below normal. The lowest temperature was 14° at Bentonville on the 2d. Killing frost or freezing temperatures covered the entire State on the 3d. Above-normal temperatures prevailed from the 7th to the 18th after which the temperatures were close to normal.

A few moderate to locally heavy showers occurred on the 3d. Fair weather prevailed from the 5th to the end of the month, any rains which fell being mostly light, widely-scattered showers. Precipitation totals ranged from 0.40 inch at Perryville and Waldron to 4.00 inches at Huttig Dam. All stations reported below-normal precipitation; the departures from normal ranged from -0.23 inch at Arkansas City to -4.34 inches at Alum Fork. Rainfall averaged 1.37 inches. Smaller amounts fell in only five of the previous sixty-four Novembers: 1894 with 1.12 inches; 1903 with 0.64 inch; 1910 with 0.47 inch; 1943 with 1.10 inches; and 1949 with 0.37 inch.

After a few showery days early in the month, ideal weather for outdoor activities persisted through the rest of November. Farm work included picking remnants of corn, cotton, rice, and soybeans; plowing, clearing, and fencing; pruning orchards; applying paradichlorobenzene for borers; and butchering, gathering pecans, cutting stalks, etc. Streams were low and water was scarce in some localities. Oat pastures were providing some pasture but supplemental feeding of livestock was necessary. Considerable livestock was being sold because of the feed shortage. Rains were needed to revive the pastures and to replenish the soil moisture for the crops to be raised in 1955.

Lucuis W. Dye

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

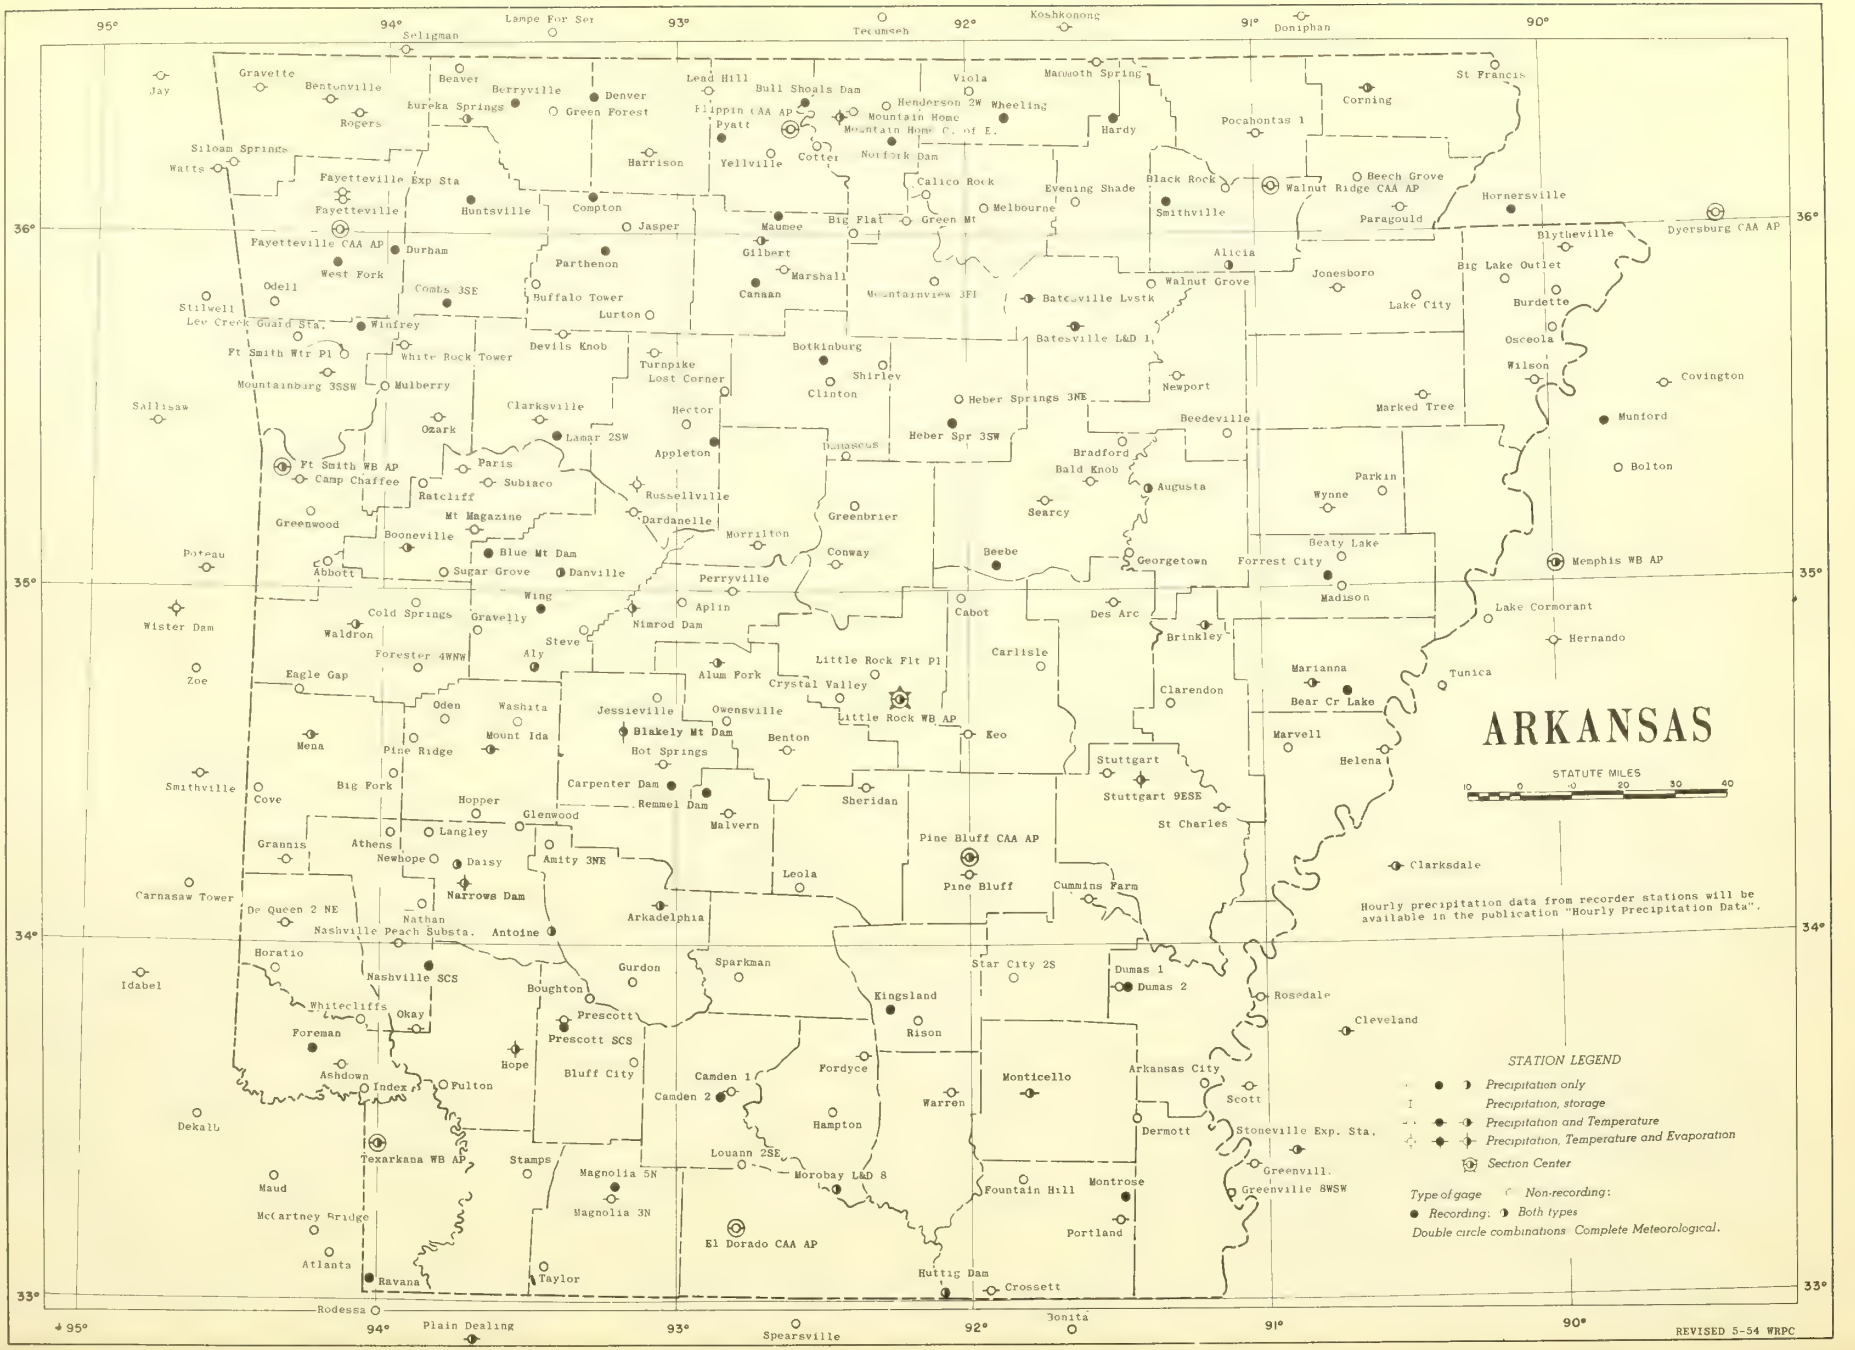
Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.



Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for seccessive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

| | |
|---|---|
| Ⓓ | Data in the column formerly headed "No. of Days .01 or more" have been changed to "No. of Days .10 or more" effective January 1, 1954. |
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data). |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 20 cents per copy; monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary). Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

# CLIMATOLOGICAL DATA

## ARKANSAS

DECEMBER 1954

Volume LIX No. 12

ASHEVILLE: 1955

## ARKANSAS - DECEMBER 1954

### WEATHER SUMMARY

Temperatures averaged slightly above normal and rainfall 13% above normal. Farm activities consisted principally of the usual fall chores, caring for livestock, fencing, clearing, butchering, hunting, etc.

The first three weeks averaged cooler than normal; the fourth week, mild. The 29th and 30th were cool and a new warm spell began on the last day of the month. Temperatures over the southeast portion and in the extreme southwest averaged below normal; elsewhere, temperatures were mostly warmer than normal with the greatest departure, +2.9°, at Perryville, about 40 miles northwest of Little Rock. Monthly mean temperatures ranged from 37.8° at Siloam Springs to 48.5° at Okay. The coldest temperature registered during the month was 8° at Siloam Springs on the 30th; the warmest was 75° at Arkadelphia on the 23d.

Rainfall for the State as a whole averaged 4.75 inches. In general, the southeast and southwest counties received less than four inches; the northeastern counties and several counties southeast of Fayetteville received over six inches. Bradford with 8.49 inches and White Rock with 8.16 inches received the most. The least was 1.52 inches at Fountain Hill. The two principal precipitation periods were the 11th and 12th and from the 26th to the end of the month. Most stations reported no snow during the month or only flurries. Snowfall in measureable amounts occurred at a number of stations, however, the greatest fall, 8.5 inches, occurred at Gravette in the extreme northwest corner of the State.

Early in December, the weather was favorable for outdoor work but the soil was too dry for plowing. Some cotton was pulled but some remained in the fields even after the middle of the month. Pastures were poor and feed was scarce. Livestock required supplemental feeding and selling was heavy. Besides caring for livestock and a small amount of field work, farm activities consisted mostly of clearing, fencing, butchering, and hunting. The soil moisture situation improved at the last of the month due to the generous rains. Some streams rose four to six feet. Winter grains and pastures improved but the farm ground became too wet for plowing.

There were no severe storms nor floods.

Lucius W. Dye

† Continuation of Sugar Loaf Mountain record.

## REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Station names appearing in tables, but for which data are not listed, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 0630 CST. "WTR EQUIV" in Table 7 means the water equivalent of snow on the ground. It is measured at selected stations when the depth of snow on the ground is two inches or more. Water equivalent samples are necessarily taken from different points for seccessive observations; consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

Additional information regarding the climate of Arkansas may be obtained by writing to any Weather Bureau Office or to the State Climatologist at Weather Bureau Airport Station, Box 1819, Little Rock, Arkansas.

| | |
|---|---|
| Ⓒ | Data in the column formerly headed "No. of Days .01 or more" have been changed to "No. of Days .10 or more" effective January 1, 1954. |
| - | No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. |
| + | And also on a later date or dates. |
| * | Amount included in following measurement, time distribution unknown. |
| // | Gage is equipped with a windshield. |
| B | Adjusted to a full month. |
| C | Data for recorder stations, denoted by "C", are processed for special purposes and published later in Hourly Precipitation Data. |
| E | Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall. |
| M | One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month. |
| R | Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data). |
| T | Trace, an amount too small to measure. |
| V | Includes total for previous month. |
| SS | This entry in time of observation column in Station Index means observation made near sunset. |

Subscription Price: 20 cents per copy; monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary). Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

NWRC, Asheville, N. C. -- 2-14-55 -- 1005

## CORRECTIONS

| | |
|---|---|
| April 1950: | Nimrod Dam, Table 2, mean temperature should be 56.8M. |
| | Nimrod Dam, Table 5, mean max should be 67.7. |
| June 1954: | Weather Summary, last line of fourth paragraph in Severe Storm Data should read "near Atkins, Pope County". |
| June 1954: | Fordyce, Table 2, days with max of 90 or above should be missing. |
| August 1954: | Booneville, Table 2, mean min should be 73.7, mean 87.7, lowest 68 on the 13th, and degree days 0. |
| | Booneville, Table 5, min temperatures for the 1st - 31st inclusive should be 73, 70, 73, 75, 81, 75, 79, 76, 70, 70, 70, 76, 68, 72, 75, 75, 80, 72, 76, 71, 74, 75, 73, 74, 73, 73, 74, 73, 75, 73, 72. |
| October 1954: | Mountain Home C of Eng., Table 2, days with max 90° or above should be missing. |
| November 1954: | Helena, Table 2, delete mean max, mean temperature, departure, highest and date, and total degree days. |
| | Helena, Table 5, delete all max temperatures. |

## ARKANSAS

ANNUAL SUMMARY 1954

Volume LIX No. 13

ASHEVILLE: 1955

# ARKANSAS - 1954

## WEATHER SUMMARY

The year was hot and dry. The average annual temperature was 63.3 degrees which was 1.9 degrees above normal and was the second hottest year since 1891. The average annual rainfall was 37.88 inches which was 10.94 inches below normal and was the sixth driest year of record.

January brought slightly above normal temperatures followed by a very warm February, 7.0 degrees above normal. Brief coolings in March, 1.6 degrees below normal and in May, 4.3 degrees below normal were the only months that were substantially below normal. After a few days below normal, April rapidly warmed into the second highest of record which was 4.8 degrees above normal with an average of 66.4 degrees. This trend continued in June with 2.5 degrees above normal and reached its apex in July, the hottest of any previous month of record, with an average of 85.8 degrees which is 5.3 degrees above normal. The extreme temperatures of July carried over into August to make it also one of the hottest of record with 85.3 degrees which like July was 5.3 degrees above normal. This was the second hottest summer of record. The average temperature for the period of June, July, and August was 83.6 degrees while the normal average for that period is 79.2 degrees. High temperatures continued until the middle of October when temperatures began falling generally until at the close of the month freezing temperatures had spread over the entire State. Temperatures were near normal in November and slightly above in December.

This was among the driest of all years of record and ended a three-year period drier than any other three-year period on record. The only similar period on record ended in 1901 with a period average of 41.93 inches compared to 41.48 inches for the three years ending in 1954. Months with above normal rainfall were January, May, October, and December. Of the other eight months June was driest averaging only 1.28 inches. A brief relief from the drought came in May when the average rainfall was 5.43 inches and more permanent relief came in October with an average rainfall of 4.97 inches. The greatest annual total, 50.23 inches fell at Eagle Gap and the least, 28.73 at Damascus. Heaviest rainfall totals were in the southwest and at scattered stations of the northwest. Most serious deficiencies were in the southeast and east central portions of the State.

Principal crop production in 1954 was down five percent in value from the 1953 total but was slightly higher than the 1943-52 average. Cotton ranked first in value but was eight percent below 1953. Drought reduced crops of soybeans, hay, and corn. However, oat production in 1954 nearly doubled the previous year's crop. Valued at $10,811,000, this was a record high for oats. Extensive damage to tender crops resulted from a cool period with frosts on May 3 and 4. Progressive deterioration of crops and pastures because of dry weather and high temperatures occurred from June through September. One exception was cotton which generally survived this combination of adverse weather. Widespread and adequate rainfall in October revived pastures and restored water reserves.

## STORMS

Severe storms of the year began on February 15 with tornadoes occurring at Clarksville and in the Kellum Community of Sevier County, and a windstorm in southwestern Conway County. Damage was extensive. Tornadoes on the 16th and 19th at Sulphur Springs Community and at Greenwood caused considerable damage and on the 27th a tornado and hailstorm occurred in Phillips County. In March on the 24th and 25th there were two tornadoes in Benton County with no loss of life but four people were injured. Damaging winds occurred in Boone County at the same time. In April losses from severe storms of all kinds totaled an estimated $455,000. There were nine tornadoes, considerable high winds and hailstorms. Three persons were injured by tornadoes and two by lightning. In May extensive damage to crops and property resulted from hail, heavy rains, lightning, five tornadoes, and windstorms on the 1st, 2nd, 9th, 29th, and 31st. June had hail, high winds, electrical storms, and three tornadoes with an estimated property loss of $424,125. Severe storms in July included two tornadoes, several hailstorms and windstorms. There were three persons injured from high winds and one death by lightning. Total loss was estimated at $86,660. In August severe local storms occurred on the 19th, 28th, 29th, and 30th with an estimated loss of $122,000. This included damage to principal crops from hail. One tornado occurred in Sevier County. One man was killed by lightning on the 28th. No severe stroms were reported from September through December.

## REFERENCE NOTES

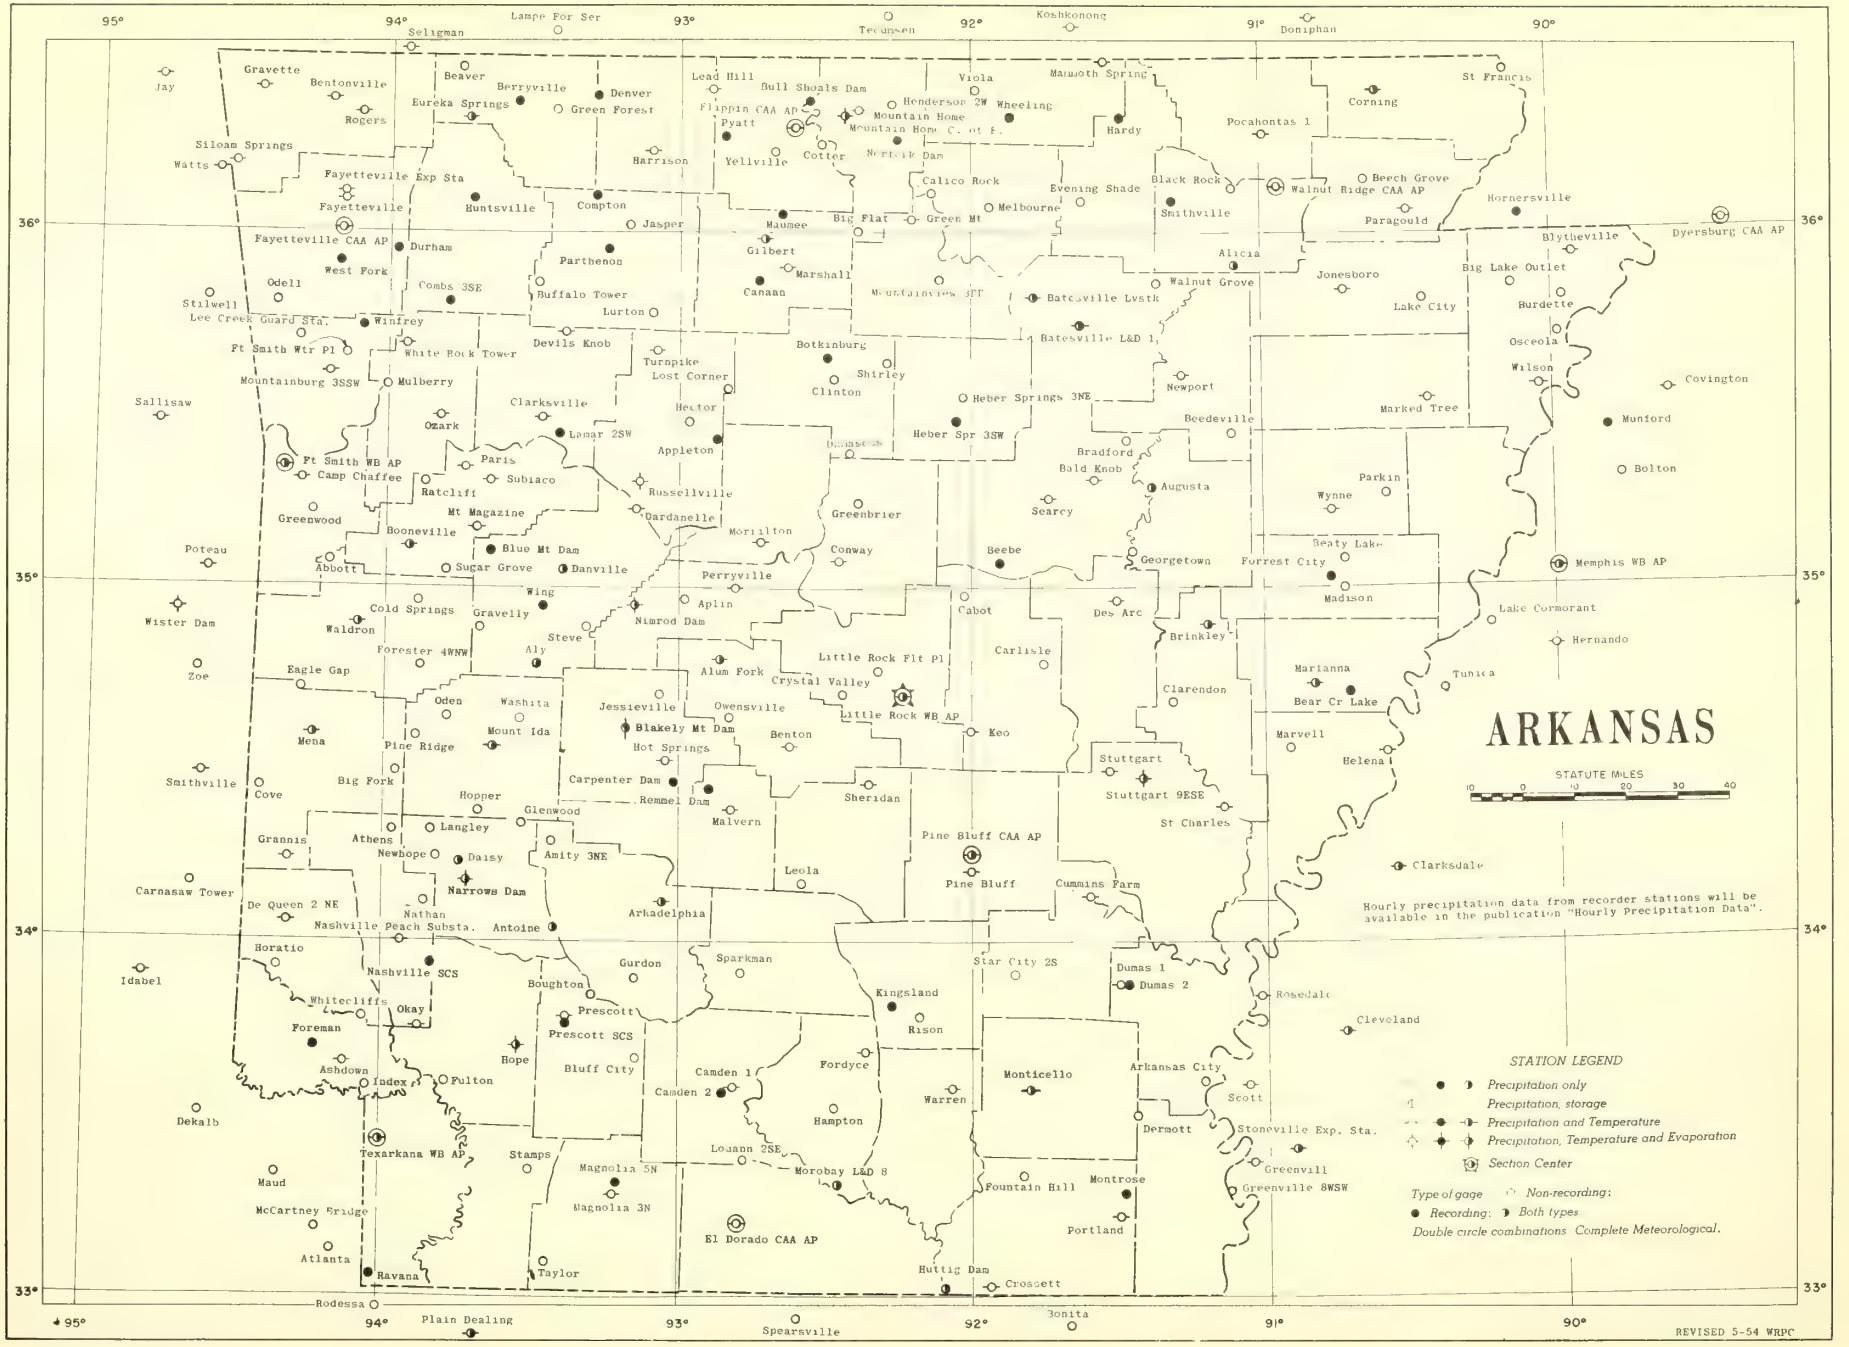
Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F; precipitation and evaporation in inches, and wind movement in miles.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 4.

The four digit identification numbers in the Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and Direction from the post office.

Delayed data and corrections will be carried in the June and December issues of Climatological Data.



Data for recorder stations denoted by "C" are processed for special purposes and published in "Hourly Precipitation Data". Length of record for recorder-only stations may be found in the annual issue of "Hourly Precipitation Data".

Additional information regarding the climate of Arkansas may be obtained by writing to any Weather Bureau Office or to the State Climatologist at Weather Bureau Airport Station, Box 1819, Little Rock, Arkansas.

- \- No record.
- \+ Also later date (dates) or months.
- * Amount included in following measurement.
- // Gage is equipped with a windshield.
- B Adjusted to full month.
- E Amount is wholly or partially estimated.
- M Less than a complete month of record available; if average value is entered, less than 10 days of record are missing; see monthly Climatological Data for detailed daily record.
- R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
- T Trace, an amount too small to measure.
- V Includes total for previous month.

Subscription Price: 20 cents per copy; monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.
